EXAMINATION POLICY

The examination policies are derived from the guidelines and regulations set forth by Dr. Babasaheb Ambedkar Technological University (DBATU). The Examination section operates under the authority of DBATU and is overseen by the Head of the Institute (Principal). The university primarily utilizes an online system for conducting examination-related procedures. Here are the policies pertaining to different examination activities.

Eligibility: Admissions to the First Year Engineering and Direct Second Year Engineering courses are conducted in accordance with the government rules and regulations set by the Directorate of Technical Education, Maharashtra. This includes both the government quota and the Institute Level quota. Once the admission process is completed by the Directorate of Technical Education, the next important step is to verify the eligibility of each newly admitted student for their chosen course in the Institute. This verification process is done offline. The student must fill out the university Registration form after notification and university assign PRN (Permanent Registration Number) to each registered candidate. This number is essential for completing all online Examination forms of the university.

1. Examination Form Process: - DBATU offers two types of courses: undergraduate and postgraduate. In order to appear for the examination, each registered student must fill out the examination form. The examination form filling process is done online and the institute informs students when the process begins.

2. Exam form filling schedule: - The notice will be prepared by the examination section and sent to all students via all departments. The department Examination Coordinator will guide students to fill in the necessary information in the exam form. The department Examination Coordinator verifies the form filling and if any issues arise, they will inform the examination section right away and the examination section will forward the issue to the university via mail to the exam support. The exam support will solve the issue and inform the exam section about the status of the issue. The examination section will then inform the concerned students through the class coordinator to fill in their examination form.

a. Examination form fees payment: - Exam form fees are to be paid online through respective student login tab made available by DBATU (<https://dbatuerp.com/studentLogin>). After paying university fees student get payment receipt of successful transaction.

b. Collection and approval of examination forms: Students who have filled exam form and made successful payment transaction through student login is visible in institute login provided by DBATU (<https://dbatuerp.com/>). The examination forms are available for approval in institute login. **Once forms are approved by institute, student can download respective examination hall ticket.** Examination section once again informs students to submit their examination forms through department Examination Coordinator (Those who have not submitted till last date).

c. Examination forms after Late fees: -

Students, who have not filled the examination form before the last date, have to appear at the University for filling in the examination form if permitted by

university (which rarely happens). Students can fill in the exam form only if the university allows them with super late and fine fees.

2. **Summary & Time Table:** - Students who have received examination hall ticket are shown in institute login provided by university. On the basis of student list available in institute login examination summary is prepared and as per university schedule examination conducted in institute.

3. **In sem Examination:** -

- Throughout the course of a semester, the teacher will administer a minimum of two formal assessments to the students as part of the continuous assessment method employed during the semester.
- The method of conducting assessments under the continuous mode and the assignment of marks will be communicated by the teacher at the start of the course. This information will be shared with the Dean-Academics or Dean in the University, or the Principal/HoD in the college during the first week of the semester. Additionally, it may also be made available on the University/College Portal.
- The teacher is required to maintain a record of the ongoing assessment of a class for a minimum of three years and present it to the college Principal or Dean-Academics, if necessary.
- The teacher is required to submit the in-semester performance of all students, including both continuous assessment and mid-semester examination results, to the institute before the end-semester examination. Additionally, these results should be displayed on the notice board as well as on the College/University Portal.
- In accordance with the college's Academic Calendar, it is scheduled that each theory course will have a single Mid-semester test. This test will be conducted as per academic calendar.
- A student who has not completed in the in-semester continuous tests and/or midterm examination for one or more subjects will be deemed as not having fulfilled the requirements of the course. Consequently, they will be required to enroll again for the corresponding subjects/course in the subsequent academic year.

a. **Practical/Oral Examination:** - As per DBATU instructions Practical/ Oral examinations are planned in institute.

b. **Online Marks Entry:** - Online marks entry for Termwork/internal/External is made through subject teacher login. In the process of marks entry, first step is to create HOD login through institute Examination coordinator. In second step faculty login is created by HOD. Once faculty login is created, HOD can assign subject to respective faculty and marks entry must be completed by faculty. The submitted marks by faculty are finally confirmed by HOD and are submitted to the University. (<https://dbatuerp.com/facultyLogin>).

consideration the class, branch, and pattern. These securely sealed bundles, accompanied by the submission report from the senior supervisor, will then be dispatched to the respective Sub centers.

5. Result analysis: -

The university ledger can be accessed through the institute login and is subsequently sent to the Head of the department. These ledgers are forwarded by the exam section of the institute to the respective departments. At the departmental level, a thorough result analysis is conducted, which includes the number of students who appeared for the examination, the number of students who passed, and the number of students who achieved distinctions, first class, higher second class, second class, ATKT, etc. This result analysis is carried out for each subject across different classes, ranging from FY to Final year B. Tech. The result analysis is then forwarded to the administrative office, specifically the Principal's office. A list of the top three students in each class and branch is prepared, and this list is verified by the respective departments. The statement of marks for students is generally received from DBATU approximately 30 days after the results are declared, and it is subsequently distributed to the students.

6. Photocopy and revaluation: -

After declaration of university results, students have the option to apply for a photocopy and revaluation of their answer book if they are unsatisfied with their results. The schedule for photocopy and revaluation is communicated to the students by DBATU as and when it is declared. This entire process is conducted online, where students utilize their PRN and password to apply for photocopy and revaluation. Currently, the fees for photocopy and revaluation are directly paid to the university through student login only. Once the application and fees are submitted, the university sends a photocopy of the answer book to the student's registered email. The university then replaces the student's statement of marks and provides a new mark statement to the student.

7. Grievances Redressal System: -

The examination section has implemented a grievances redressal system to handle and resolve various issues such as result queries, photocopy requests, and exam form filling problems. There are two categories of grievances related to examinations:

a) Grievances that can be resolved through direct communication with the University via Web Mail. This includes grievances related to exam forms, photocopy requests, and revaluation forms.

b) Grievances that require students to submit supporting documents along with

In the compilation of the list of junior supervisors, the allocation of blocks is carried out. The allocation of blocks is done in a way that ensures that junior supervisors from the same branch are not assigned to students appearing for the examination in the same branch. The allocation of blocks takes place one hour prior to the start of the examination. Junior supervisors are required to sign in the reporting register before commencing their duties.

g. Question paper downloading and printing: -

Question papers are accessed online in a secure and confidential environment through the university's Question Paper Distribution (QPD) portal. This process takes place in a confidential room under the supervision of senior staff members. A one-time password is sent to the Principal and Examination Coordinator's mobile phones by DBATU approximately 45 minutes before the start of the examination. The Examination Coordinator then downloads the question papers from the QPD portal and verifies the pattern code, class, and subject name. The master copy of the downloaded question paper is handed over to the QPD in charge. The question paper is then printed by Xerox machine operators in the expected number of copies as per the day-wise prepared summary. Additionally, around 5-8 extra copies of each paper are printed, some of which are required to be sent with the answer sheet bundles to the respective CAP, and one copy is kept in the library. All these activities are closely monitored through closed circuit TV cameras, with the Principal overseeing the proceedings in the confidential room.

h. Question papers Distribution of in Exam blocks: -

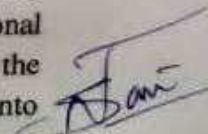

Once the printing of question papers is completed, senior supervisors meticulously tally the number of question papers in accordance with the number of students assigned to each block for various subjects within a specific branch. Following the prescribed pattern, they then proceed to distribute the packets to the respective blocks with the assistance of the examination section in charge.

i. Queries/corrections in the question paper: - The examination coordinator is responsible for reviewing any inquiries or corrections regarding the question paper on the QPD query portal. If there are any queries, whether they are already available on the QPD portal or forwarded to the Principal or Examination coordinator's mobile, the corrections in the question papers, as received from the university through the QPD portal, are disseminated to the relevant students who appeared for the examination by senior supervisors.

j. Block wise answer sheet submission to examination control room: - After the examination is concluded, the junior supervisor will tally and validate the quantity of answer sheets gathered in their assigned area before submitting them to the control room. In the control room, the senior supervisor will meticulously count and authenticate the answer papers, along with reviewing all additional information provided in the junior supervisor's report. Subsequently, all the bundles of answer papers will be carefully packaged and sealed, taking into

their application to the University. This category includes grievances related to with held results due to backlog or eligibility issues, subject absenteeism, and name corrections.

To address these grievances, the University has established a WhatsApp group, email conversation and Ticket system where institute coordinator can raise the queries and seek resolution.

8. Convocation: -

It is mandatory for students to apply for their Degree Certificate (Convocation) after the final year B. Tech. results are declared. The university sends a notification to the Institute level regarding the conduction of the convocation ceremony, along with the degree certificates and a list of students who have applied for convocation. DBATU and the institute examination section send a message to all the students who have applied for convocation, providing them with the details of the ceremony at the Institute level. Additionally, the individual departments contact the students and inform them about attending the convocation ceremony. The Institute conducts the convocation ceremony in accordance with the guidelines set by DBATU.

The final examination of the semester will encompass the entire course syllabus and will be administered in accordance with the University's timetable at the conclusion of each semester.

a. Passes and Fail :

(Revised as per the Item 8 of the Minutes of the Academic Council Meeting held on 19th August 2017)

(1) The candidates who obtain 40% and more marks in a subject head of the end semester examination AND 40% or more of the total marks of a subject head shall be deemed to have passed the respective subject head.

(2) The candidates who obtain less than 40% of marks in a subject head of the end semester examination and less than 40% the total marks of a subject head shall be deemed to have failed in the respective subject head (Grade FF).

b. Stationary requirement: - Depending on the strength of students to be appeared in University theory examination, examination section gives stationary requirement to university by email and Google form provided by university.

c. Junior supervisor and peon requirement: - Upon receiving the summary of the theory examination session, the exam section proceeds to distribute the requirements for junior supervisors to all departments, taking into account the allocation of 30 to 35 students per block. Subsequently, the departments provide the list of junior supervisors, which is then used to create a daily schedule for their duties. To ensure punctuality, the junior supervisors are notified via mobile messages about their assigned responsibilities. Additionally, the departments are also informed about the requirement for peons, which is sent along with the junior supervisors' requirements.

d. Seating arrangement plan: -

The Exam Section prepares a session-wise seating arrangement and block location chart. The exam section displays this on the notice board before the start of the exam. The seating plan for each block shows the assigned bench numbers and is posted outside that block. The block slip also displays the class, subject, exam pattern, and duration for that block. A copy of the block slip is given to the junior supervisor to help them understand the seating plan, subject, pattern, and class assigned to their block. The junior supervisor receives a set of barcodes listing exam details and students for their block, along with a junior supervisor report.

e. Peon allotment: -

Prior to the commencement of the examination, a meeting is organized for the peons under the supervision of the Examination coordinator and the Examination section in charge. During this meeting, the peons are briefed about their responsibilities. Once the examination begins, the peons are assigned to different blocks where they carry out tasks such as cleaning, arranging desks, and providing necessary materials and supplements to the junior supervisors during the examination hours. Additionally, a few peons are designated for the arrangement of the Control room.

Single Pass Compiler

Multi pass compiler

① It reads data once and translates its

① It reads the data in multiple times & it converts it into numerical forms.

② It is faster

② It is slower as compare to single pass compiler

③ less efficient to code optimization and generation

③ More efficient to code optimization & generation

④ It is a narrow compiler

④ It is wide compiler

⑤ It require large memory

⑤ It require less memory

⑥ eg - Pascal
c language

⑥ eg - Module-2 language

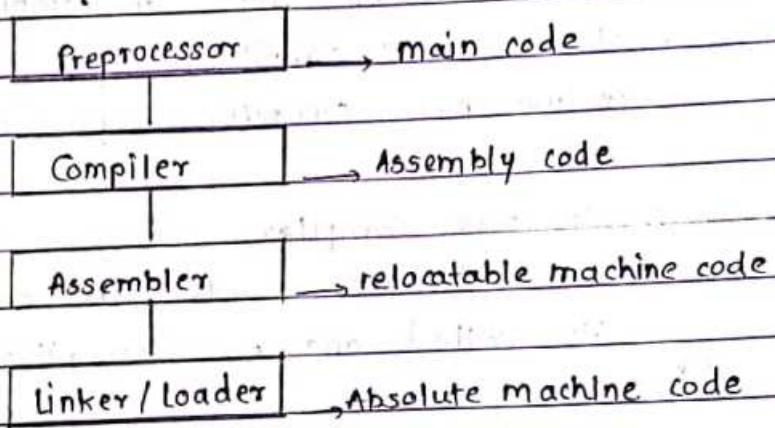

3

a) Compiler

It is a program in which compiles high or translates high level language (C, C++, Java) into low level language (Binary format or

Compiler compiles the human readable code into the machine understandable code without changing the meaning of the program.

#3

Preprocessor scan the code and take the main code of the program and hide the header file of the program.

Compiler take the main code of the program as an input and to produce or translate its into assembly code.

Assembler take the assembly code from the compiler as input and to convert it into relocatable machine code.

Linker/loader takes the relocatable machine code and it converts it into absolute machine code and it loads in a main memory.

source code → Compiler → Machine code

- Compiler also find the errors of the program.
- Compiler ^{compiles} ~~produces~~ ^{large} ~~less~~ amount of ~~code~~ in less amount of time.
- It supports to the highlevel language.

There are two types of compiler

① One pass compiler

② Two pass compiler

① One pass compiler

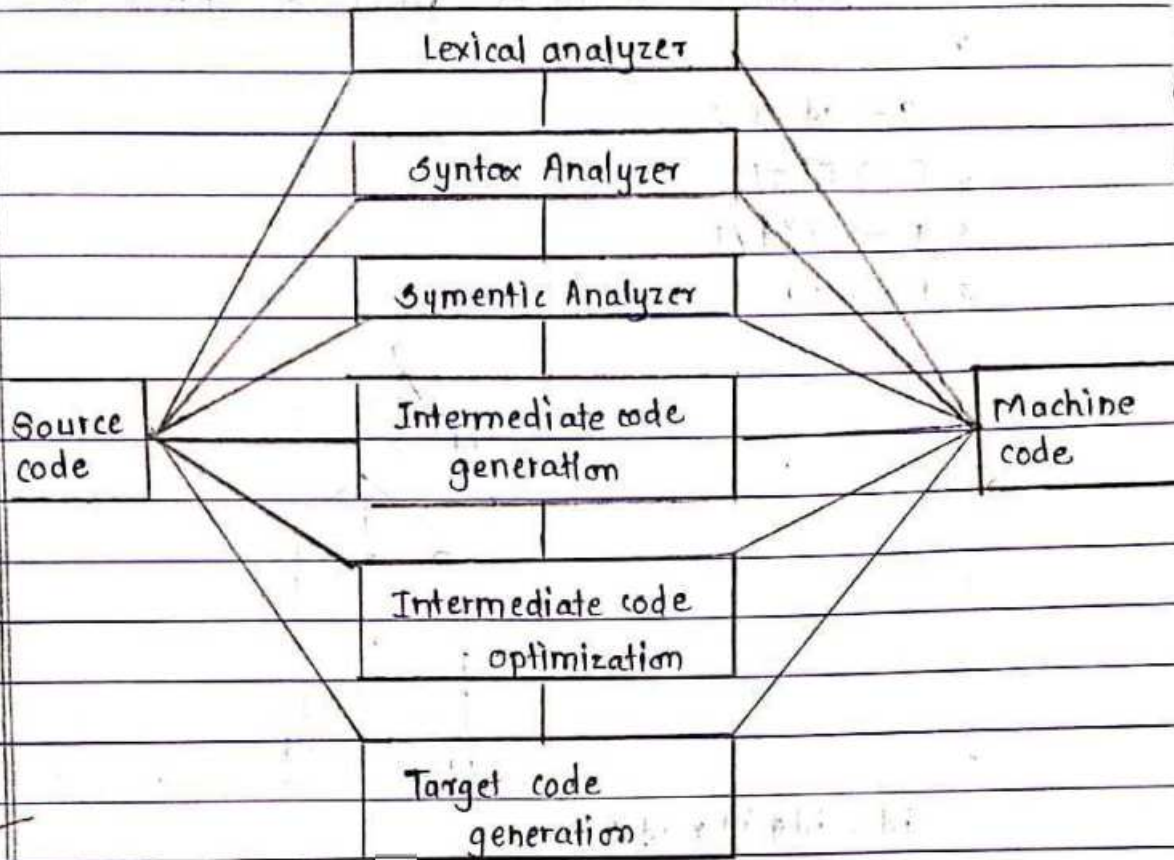

Compiler reads code once and it translate its called one pass compiler

② Two pass compiler

Compiler reads code multiple ~~ty~~times and converts it into numerical forms called two pass compiler

1e-3

a)

5

These are six phases of compiler

d) lexical analyzer

lexical analyzer scan the code and it generates lexemes and tokens.

eg. $x = a + b * c;$

lexemes	tokens
x	Identifier
$=$	Operator
a	Identifier
$+$	Operator
b	Identifier
$*$	operator
c	Identifier
$;$	operator

2) Syntax analyzer.

Syntax analyzer generates parse tree

$$S \rightarrow id = E ;$$

$$E \rightarrow E * T / T$$

$$E \rightarrow T * F / F$$

$$F \rightarrow id$$

$$id = id * id * id ;$$

3) Symentic Analyzer

Symentic Analyzer can check the free rules of the compiler check the wide spaces or any comments

4) Intermediate Code generation.

Intermediate code generator to generate the Tree address code.

Intermediate code

Tree address code

$$id = id + id * id ;$$

↓ ↑

$$x = a + b * c ;$$

$$T_0 = b * c ;$$

$$T_1 = a + T_0 ;$$

$$T_2 = T_1$$

5) Intermediate code optimization.

→ $T_0 = b * c;$

$x = a + T_0;$

6) Target code generation

Target code generator generates the code in the assembly language.

c)

- lex tool is a tool which is convert the lexical analyzer
- lex tool is always generated the set of tokens

lex.l ——— lex compiler ——— lex.yy.c

lex.yy.c ——— c compiler ——— a.out

I/P string ——— a.out ——— set of tokens.

3

- lex file is converted into lex.yy.c
- i.e. file with the help of lexical analyzer
- lex.yy.c is converted into a.out
- lex.yy.c is always naming a.out file
- Then input string is converted into the set of tokens.

Q.2 Solve Any Two of the following.

(3 Marks for Each Question)

A) Write a short note on Autoencoders in Deep Learning.

Definition: Autoencoders are self-supervised machine learning models which are used to reduce the size of input data by recreating it. These models are trained as supervised machine learning models and during inference, they work as unsupervised models that's why they are called self-supervised models. Autoencoder is made up of two components:

1 Marks

1. **Encoder:** It works as a compression unit that compresses the input data.

2. **Decoder:** It decompresses the compressed input by reconstructing it.

Q.3 Solve Any One of the following.

8 Marks

A) Consider the given dataset, apply Baye's Algorithm & predict that if a fruit has the following properties, then which type of fruit it is?

Fruit = {Yellow, Sweet, Long}

Fruit	Yellow	Sweet	Long
Mango	350	450	0
Banana	400	300	350
Other	50	100	50

Total

Conditional Probability $P(A|B) = \frac{P(B|A) * P(A)}{P(B)}$ — 1 mark

$X = \{Yellow, Sweet, long\}$

$P(X|Mango) =$

$P(X|Banana) =$

$P(X|Other) =$

B) For the given dataset apply Baye's Theorem & predict the outcome for a car if, car = { Red, Domestic, SUV }

Color	Type	Origin	Stolen(Yes/No)
Red	Sports	Domestic	YES
Red	Sports	Domestic	NO
Red	Sports	Domestic	YES
Yellow	Sports	Domestic	NO
Yellow	Sports	Imported	YES
Yellow	SUV	Imported	NO
Yellow	SUV	Imported	YES
Yellow	SUV	Domestic	NO
Red	SUV	Imported	NO
Red	Sports	Imported	YES

Conditional probability $P(A|B) = \frac{P(B|A) \times P(A)}{P(B)}$

$X = \{ \text{Red, Domestic, SUV} \}$

- 1 Mark

1) $P(\text{Red} | \text{Yes}) = \frac{P(\text{Yes} | \text{Red}) \times P(\text{Red})}{P(\text{Yes})} = \frac{3}{5}$

2) $P(\text{Domestic} | \text{Yes}) = \frac{P(\text{Dom} | \text{Yes}) \times P(\text{Dom})}{P(\text{Yes})} = \frac{2}{5}$

3) $P(\text{SUV} | \text{Yes}) = \frac{P(\text{Yes} | \text{SUV}) \times P(\text{SUV})}{P(\text{Yes})} = \frac{1}{5}$

$P(X | \text{Yes}) = \frac{3}{5} \times \frac{2}{5} \times \frac{1}{5} = \frac{6}{125} = 0.048$

$P(X | \text{Yes}) = 0.048$

- 3 Marks

1) $P(\text{Red} | \text{No}) = \frac{P(\text{No} | \text{Red}) \times P(\text{Red})}{P(\text{No})} = \frac{2}{5}$

2) $P(\text{Domestic} | \text{No}) = \frac{P(\text{No} | \text{Dom}) \times P(\text{Dom})}{P(\text{No})} = \frac{3}{5}$

3) $P(\text{SUV} | \text{No}) = \frac{P(\text{No} | \text{SUV}) \times P(\text{SUV})}{P(\text{No})} = \frac{2}{5}$

$\therefore P(X | \text{No}) = 0.072$

- 3 Marks

So max value for probability $P(X | \text{No}) = 0.072$. So this type of car classified as not stolen car.

$$3) P(\text{Other long} | \text{Mango}) = 0.$$

$$P(X | \text{Mango}) = 0.53 \times 0.69 \times 0 = 0.$$

for Banana.

$$\therefore P(X | \text{others}) = 0.33 \times 0.66 \times 0.33 = 0.072$$

So we have

$$P(X | \text{Mango}) = 0.$$

$$P(X | \text{Banana}) = 0.65 \text{ — max. value of probability}$$

$$P(X | \text{others}) = 0.072$$

• Local Acceleration & it is defined as rate of increase of velocity with respect to time at given point flow field.

we have,

$$a_x = u \cdot \frac{\partial u}{\partial x} + v \cdot \frac{\partial u}{\partial y} + \omega \cdot \frac{\partial u}{\partial z} + \frac{\partial u}{\partial t}$$

$$a_y = u \cdot \frac{\partial v}{\partial x} + v \cdot \frac{\partial v}{\partial y} + \omega \cdot \frac{\partial v}{\partial z} + \frac{\partial v}{\partial t}$$

$$a_z = u \cdot \frac{\partial w}{\partial x} + v \cdot \frac{\partial w}{\partial y} + w \cdot \frac{\partial w}{\partial z} + \frac{\partial w}{\partial t}$$

In above equation the expression

$$\frac{\partial u}{\partial t}, \frac{\partial v}{\partial t}, \frac{\partial w}{\partial t} \text{ is known as}$$

Local acceleration.

• Total Acceleration :-

Total acceleration is the sum of Local acceleration & convective accelⁿ

$$eq^n = \text{Total acceleration} = \text{Local Acceleration} + \text{convective accel}^n$$

Q-3]

a] In the fluid flow forces following are present :-

• Reynolds eqⁿ =

If the forces due to compressibility is negligible in above eqⁿ the eqⁿ at motion is called as reynold's eqⁿ of motion.

$$F = F_g + F_p + F_v + F_t \longrightarrow \text{Reynolds eq}^n$$

6.	Explain velocity potential function	3	2
----	-------------------------------------	---	---

Ans

It is defined as scalar funⁿ of space & time such that its negative derivative w.r.t any direction gives the fluid velocity in that direction. It is denoted by (ϕ) .
 we have continuity equation.

$$\frac{\partial u}{\partial x} + \frac{\partial v}{\partial y} + \frac{\partial w}{\partial z} = 0$$

$$\therefore \frac{\partial^2 \phi}{\partial x^2} + \frac{\partial^2 \phi}{\partial y^2} + \frac{\partial^2 \phi}{\partial z^2} = 0$$

These is the Laplace equation.

7.	Explain any one in brief a) Venturimeter or b) Orificemeter	4	3
----	---	---	---

velocity potential is a function whose gradient is equal to the velocity vector.

Ans

a) Venturimeter: A venturimeter is device used for measurement of fluid through pipe is consist of Three part.
 1] A short converging part 2] throat.
 3] Diverision part.

$$\rho = \frac{a_1 a_2}{\sqrt{a_1^2 - a_2^2}} \sqrt{2gh}$$

The venturimeter effect is the reduction in fluid pressure that result when a fluid flow through a constricted section of pipe.

Venturimeter is a type of flow meter that works on the principle of Bernoulli's Equation.

Venturimeter is flow measurement instrument. Venturimeter is used to measure the speed of flow of fluid is flowing through a pipe.

2] Hot lime soda process -

1] In this Hot lime soda process soluble salts Ca & Mg chemically converted into Insoluble compound by adding calculated amount of lime & soda at 80°C to 150°C

construction :-

Hot lime soda process consist three main parts

1] Rea^n tank :- In this Rea^n tank Hard water steam, chemicals throlly mix. eg. soda lime

2] Sedimentation :- sludge is chuted down.

3] Sand tank :- Sand tank is conform that water is quiet clear

Working -

In this rea^n tank hard water steam & chemicals are throlly mix & rea^n are converted as follow.

Hot lime soda process is sperial then cold

lime soda process because

1) At Urgh temp rea^n are fast

2) No need to add coagulant

Advantage :-

Explain properties of good fuel.

Followings are properties of Good fuel.-

1] High calorific value-

Amount of heat liberated by complete combustion of one unit mass of fuel is called as calorific value. So, good fuel should have high calorific value.

2] Low relative cost-

Good fuel should be easily available in the market with low relative cost.

3] Low moisture content-

Good fuel should have low moist as the moisture content increases calorific value, decreases, because some part of the produced heat is utilized to evaporate moisture, so good fuel should have low moisture content.

4] Moderate ignition temperature-

The lowest temperature at which fuel starts to burn is called as ignition temperature. If ignition temperature is low then it catches fire easily, and if high temperature then it is difficult to ignite, so good fuel should have moderate ignition temperature.

5] Low non-Combustible matter -

The products of combustion of ash and clinker which directly decrease the calorific value of fuel, So, good fuel should have low non-combustible matter.

6] Moderate velocity of Combustion -

The rate at which fuel burns continuously is called as velocity of combustion. If velocity of combustion low, then there is wastage of time takes place. If velocity of combustion is high, then there is wastage of fuel takes place.

7] Combustion should be controllable -

Good fuel is that for which combustion should be controllable and stop when we want.

8] Products of combustion should not be harmful -

The products of harmful gaseous like NO , SO_4 causes air pollution, Therefore, it should not be produced during combustion.

Q2. Explain types of coal -

Followings are different types of Coal:-

a] Peat -

- 1] Peat is first stage of coal.
- 2] It has lowest carbon content.
- 3] It has low calorific value.
- 4] It has low or less heating value.

b] Lignite -

- 1] Lignite is brown coloured coal of the lowest grade.
- 2] It has the least content of carbon. The carbon content of lignite is 25-35%.
- 3] Lignite contains a high amount of water and makes up almost half of our total coal reserves.
- 4] It is used for electricity generation.

c] Sub-bituminous -

- 1] When lignite becomes darker and harder over time, sub-bituminous coal is formed.
- 2] Sub-bituminous coal is black and dull coal.
- 3] It has a higher heating value than lignite and contains 35-44% carbon.
- 4] It is used primarily as fuel for electric power generation.

d] Bituminous -

1] With more chemical and physical changes, sub-bituminous coal is developed into bituminous coal.

2] It is dark and hard. It contains 45-86% carbon. It has a high heating value.

3] It is used to generate electricity.

4] Another important use of this coal is to provide coke to iron and steel industries.

5] By-products of this coal can be converted into different chemicals which are used to make paint, nylon and many other items.

e] Anthracite -

1] It is the highest grade coal. It is hard and dark black in colour.

2] It has a very light weight and the highest heat content.

3] Anthracite coal is very hard, deep black and shiny.

4] It contains 86-97% carbon and has a heating value slightly higher than bituminous coal.

5] It burns longer with more heat and less dust.

Ban on plastic

Plastic bags are very big threat to the environment they are mostly made of organic polymers which are nothing but long chains of carbon atoms. These polymers are very stable chemically and hence, cannot be broken down by environmental factors easily. Plastic bags are widely used as they are important industrially and are also cheap. However years of using plastics are now showing their effects on the environments. The piles of non-degradable waste that have been created so far are polluting the air, water, soil and every other component of nature. It is high time that we become aware of this menace & contribute towards banning plastic globally. Only then we will be able to save our earth from choking to death.

Plastic: a menace to the environment

To judge the issues, we must first look into the various problems that arise out of using plastic bags. The problem with using plastic bags are as follows:-

1. They are Non-Biodegradable

Plastic bags are made up of elements that are extremely hard. They cannot be easily get decomposed. They take hundreds of years to be completely decomposed, which essentially means that almost all of the plastic ever made still exists in the environment still causing pollution.

How does microprocessor work.

Microprocessor - microprocessor is programmable, clock driven, register based electronic device that reads instruction from storage device takes the data from I/P unit and processes the data according to instruction and provides the result to O/P unit.

How it is work -

① To execute a programme, A microprocessor reads equation, instruction from memory, interprets then execute, or port it

② The right name for cycle is

- ① Fetch
- ② Decode
- ③ execute

③ This sequence is until all instruction are performed.

②) Features of 8085 microprocessor -

- ① 8085 IC is developed by Intel.
- ② 8 bit microprocessor can accept 8 bit data simultaneously
- ③ operates on single +5V D.C supply.
- ④ Designed using NMOS technology.
- ⑤ 6200 Transistor on single chip.
- ⑥ It provides on chip clock generator.
- ⑦ operates on 3MHz/10K frequency.
- ⑧ 8 bit multiplexed Address data bus, which reduce the number of pins.
- ⑨ 16 address lines hence it can address $2^{16} = 256$ I/O ports
- ⑩ 6 Hazard interrupts
RDY, $RST6$, $RST4$, $RST5$, INTR
- ⑪ It provide DMA.

1. Nuclear Reaction :-

To produce electricity in a nuclear power plant the nuclear reaction is important.

The nuclei is bombarding on a Uranium and the Uranium is split in two parts also nuclei is split the.

Due to bombarding of nuclei the heat will be produced & this heat is used to heat water & it convert into steam.

The nuclear reaction is not control by a control rod. In this Uranium is used as a main fuel.

the lead material tank will be used. < this is underground tank. to protect against radioactive waste.

3. a. Nuclear shielding :-

In Nuclear Power plant there is a harmful fuel radioactive waste is form. The shielding is used as a protection from radioactive waste to the outer environment.

It is used as protection, shielding is

① The Mathamathicals, are the pulsating magnetic field there are main two field. which is the pulsating opposite direction.

② The pulsating magnetic field are which in rotation of direction to the stator for Three phase induction motor & synchronous motor.

③ Interaction betⁿ field and Clin position is opposing rotation

③

① double pole IIM

Single pole IIM.

④ The desing & construction of linear induction motor is similar to the three phase induction motor and it is not look as a conventional Induction motor.

⑤ The linear induction motor is linear current and voltage is flow the winding.

⑥ The linear magnetic field in the motor is opposing of the motor.

Application.

- ② Due to the capacitor are short time are not more than the 20 period.
- ③ The one period are not exceed to the 3-Second.
- ④ This motor are used to the electrolyte capacitor. This capacitor are functⁿ is start the capacitor.
- ⑤ The starting torque in this motor is high.

Characteristics :-

- ① Phase angle in two winding is 90° .
- ② Torque is full load torque that is 3.4 to 4.5 in full load.
- ③ The power factor of this motor is 0.6 to 0.7 (lag)
- ④ The efficiency of this motor is 65 to 70%.
- ⑤ Rating of the power is $1/2$ kw to $1/2$ kw.

② Double Field revolving theory :-

- ① The double field revolving theory in a single phase induction motor

- ② electric AC current to flow through the main winding and produced the pulsating magnetic field.

Q. No.	Questions	Marks	CO	PO
1	Explain conventional and non-conventional energy sources?	3	1	1
2	Explain any one method of MHD power generation?	3	1	1
3	Explain any one method of Generator Excitation control?	3	1	1

* Conventional energy sources are classified into commercial non-commercial energy sources.

Conventional energy - Commercial energy sources - commercial energy sources which are less in amount in nature or we can pay cost for that energy sources called conventional energy sources. like Coal, oil & Natural gas, thermal power.

⊕ Non-commercial energy sources - sources of energy which are available in Nature in tremendous form called non-conventional energy sources. e.g. firewood, Hydropower, ~~Nuclear power~~ etc. we need pay cost for this type of energy sources.

* Non-renewable energy sources are classified into Renewable energy sources for non-renewable energy sources.

Renewable energy sources which are available in nature and again, it can be used.

Non-renewable energy sources: This type of sources are not available in nature, or in its limited form or not be created. Non-renewable energy sources destroy or extinct conditions. It is not created or use again & again. P.g like Coal (Thermal energy), Nuclear power,

Q.3. Excitation system for the generator control is that method which is current is passes through the generators ^{through the stator} then there is AC quantity. but at generator field winding by providing DC supply ^(Rectified) we can provide excitation. Excitation is required to the rotation of generator rotor.

Excitation method are as follows:

- ① Self or shunt excited method.
- ② Excitation Boost generator
- ③ Permanent magnet generator
- ④ Auxiliary winding

Excitation Boost generator is again classified into:

- ① Excitation Boost control: In excitation Boost control there is the AVR senses the Input signal AC quantity then that sense value at stator side is provided to the Rectifier. Rectifier Rectified AC quantity into DC quantity ~~at stator side~~. Then by DC quantity supply given the field winding ~~term~~ of generator then generator rotor will rotate & excitation is apply
