2022-2023

Editorial

In the Era of global warming and climate change every citizen has to reduce their own carbon foot prints to tackle with the adverse impacts of climate change. A green audit of any academic institution revels ways in which we can reduce energy consumption, water use and reduction in emission of carbon dioxide in the environment. It is a process to look into and ask ourselves whether we are also contributing to the degradation of the environment and if so, in what manner and how we can minimize this contribution and bring down to zero and preserve our environment for future generation.

Sanjeevan Engineering & Technology Institute administration has already taken a step towards the green approach and conducted green audit of campus in the year 2023. As an outcome of this institute has taken green steps to reduce its carbon foot prints by several means in campus viz. sustainable fittings, tree plantation and green computing in the administration and examination. The responsibility of carrying out the scientific green audit was given to Environmental and Civil Engineering Solutions. The organization has followed the rules and regulation of Ministry of Environment and Forest, Govt. of India and Central Pollution Control Board, New Delhi.

A questionnaire was prepared based on the guidelines and format of CPCB, New Delhi to conduct green audit. The information related to consumption of resources like water, electricity and handling of solid and hazardous waste was collected in the formats from main building support services and departments. The data collected was grouped and was tabulated in Excel sheets and analysed. The graphs of the analysed data were prepared for getting quick idea of the status. Interpretation of the overall outcomes was made which incorporates primary and secondary data, references and interrelations within. Final report preparation was carried out using this interpretation to prepare environment management plan of institute for next two years.

During the preparation of the Audit Report Hon. Principal, Hon. Vice Principal encouraged us with their full support. Registrar, Director, IQAC, Deans of faculties, and other officers of the institute were also given support to carry out this work. All Heads of the department, Directors, Co-ordinators, In-charge of the support services and engineering section of the university also gave full co-operation.

Nikhil N. Kamble (C.E.O and Head)

Acknowledgement

We express our gratitude for calling upon us for this audit, mainly the Principal and all other staff members, who were ever helpful and supported us with all the inputs needed for this audit. We thank all the teaching, non-teaching and students for helping us in conducting this audit.

Green Audit Team

Mr. Nikhil N. Kamble PhD (Sustainability), M. Tech. (Env. Eng.) Mr. Smithesh L. Bhatt B. E. (Civil. Eng.) Miss. Maithilee N. Kamble M.B.A, B. Tech. (Mech. Eng.) Mrs. Seema N. Kamble Director, ECS, B. E. (Electrical)

1. Introduction:

The modernization and industrialization are the two important outputs of twentieth century which have made human life more luxurious and comfortable. Simultaneously, they are responsible for voracious use of natural resources, exploitation of forests and wildlife, producing massive solid waste, polluting the scarce and sacred water resources and finally making our mother Earth ugly and inhospitable. Today, people are getting more familiar to the global issues like global warming, greenhouse effect, ozone depletion and climate change etc. Now, it is considered as a final call by mother Earth to walk on the path of sustainable development. The time has come to wake up, unite and combat together for sustainable environment.

Considering the present environmental problems of pollution and excess use of natural resources, Hon. Prime Minister, Shri. Narendra Modiji has declared the Mission of Swachch Bharat Abhiyan. Also, University Grants Commission has mentioned "Green Campus, Clean Campus" mission mandatory for all higher educational institutes. As environmental sustainability is becoming an increasingly important issue for the nation, the role of higher educational institutions in relation to environmental sustainability is more prevalent.

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

1.1 Need of audit:

Green auditing is the process of identifying and determining whether institutions practices are eco-friendly and sustainable. Traditionally, we are good and efficient users of natural resources. But over the period of time excess use of resources like energy, water, chemicals are become habitual for everyone especially, in common areas. Now, it is necessary to check whether our processes are consuming more than required resources? Whether we are handling waste carefully? Green audit regulates all such practices and gives an efficient way of natural resource utilization. In the era of climate change and resource depletion it is necessary to verify the processes and convert it in to green and clean one. Green audit provides an approach for it. It also increases overall consciousness among the people working in institution towards an environment.

1.2 Goals of audit:

Institute has conducted a audit with specific goals as:

- 1. Identification and documentation of green practices followed by university.
- 2. Identify strength and weakness in green practices.
- 3. Conduct a survey to know the ground reality about green practices.
- 4. Analyse and suggest solution for problems identified from survey.
- 5. Assess facility of different types of waste management.
- 6. Increase environmental awareness throughout campus.
- 7. Identify and assess environmental risk.
- 8. Motivates staff for optimized sustainable use of available resources.
- 9. The long term goal of the environmental audit program is to collect baseline data of environmental parameters and resolve environmental issue before they become problem.

1.3 Objectives of Audit:

- 1. To examine the current practices which can impact on environment such as of resource utilization, waste management etc.
- 2. To identify and analyse significant environmental issues.
- 3. Setup goal, vision and mission for Green practices in campus.
- 4. Establish and implement Environmental Management in various departments.
- 5. Continuous assessment for betterment in performance in green practices and its evaluation.
- 6. To prepare an Environmental Statement Report on green practices followed by different departments, support services and administration building.

1.4 NAAC criteria VII Environmental Consciousness:

Institutes are playing a key role in development of human resources worldwide. Higher education institutes campus run various activities with aim to percolate the knowledge along with practical dimension among the society. Likewise different technological problems higher education institutes also try to give solution for issues related to environment. Different types of evolutionary methods are used to assess the problem concerning environment. It includes Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), Carbon Footprint Mapping, Green audit etc

National Assessment and Accreditation Council (NAAC) which is a self-governing organization that declares the institutions as Grade according to the scores assigned at the time of accreditation of the institution. Green Audit has become mandatory procedure for educational institutes under Criterion VII of NAAC. The intention of green audit is to upgrade the environmental condition inside and around the institution. It is performed by considering environmental parameters like water and wastewater accounting, energy conservation, waste management, air, noise monitoring etc. for making the institution more eco-friendly.

Students are the major strength of any academic institution. Practicing green actions in any educational institution will inculcate the good habit of caring natural resources in students. Many environmental activities like plantation and nurturing saplings and trees, Cleanliness drives, Bird watching camps, No vehicle day, Rain water harvesting, etc. will make the students good citizen of the country. Through Green Audit, higher educational institutions can ensure that they contribute towards the reduction of Global warming through Carbon Footprint reduction measures.

1.5 Benefits of Green Audit to an Educational Institute:

There are many advantages of green audit to an Educational Institute:

- 1. It would help to protect the environment in and around the campus.
- 2. Recognize the cost saving methods through waste minimization and energy conservation.
- 3. Find out the prevailing and forthcoming complications
- 4. Empower the organization to frame a better environmental performance.
- 5. It portrays good image of institution through its clean and green campus.

2. Overview of Institute:

The Sanjeevan Engineering & Technology Institute, Panhala was established in the year of 1994. Institute has huge area of 13 acres and has been serving the mankind in the field science and technology.

The landscaped grounds of college are widely admired for their beauty. The most valuable investment any educational institution can make is "Nurturing Future Leaders". With the continuous rise in expectation of essential leadership standards, the institute has torch bearers have taken a responsibility for this investment to nurture the NextGen leaders with a vision to bridge the existing skill gap. With a firm step forward to attain an academic excellence, several Centres of Excellence, computer labs, and industry-academia associations have been setup at the College in association with the top leaders. The College believes that its primary stakeholders are the students. All aspects of education focus on the core values of contributing to national development while fostering global competencies among students. The College admits students from all social milieus and empowers them through intensive mentoring and counselling to face the challenges of life and become responsible and sensitized citizens of the country.

3. Methodology:

3.1 Audits to be carried out:

- Green and carbon footprint audit
- Energy audit
- Environmental audit
 - Water audit
 - Wastewater audit
 - \circ Solid waste audit
 - o Ambient noise audit
 - o Ambient air audit

4. Green and Carbon footprint audit:

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

Carbon is the basis of life on mother Earth. It is incorporated into the plants through photosynthesis, consumed by animal species through the food, present in the form of carbon dioxide (CO2) the atmosphere, locked into the rocks as limestone and compressed into the different fossil fuels such as coal and oil. As CO2 level in the atmosphere continue to increase, most climate designs or project that the oceans of the world and trees will keep soaking up more than half CO2. The plants on land and in the sea, taken up carbon by over many years increased the percentage discharged during decay, and this increased carbon became locked away as fossil fuels beneath the surface of the planet. The starting of the 21st century brought growing concern about global warming, climate change, food security, poverty and population growth. In the 21st century more carbon has been released into the atmosphere than that has been absorbed. CO2 is a principle component causing global warming. Atmospheric carbon dioxide levels have increased to 40 % from preindustrial levels to more than 390 parts per million CO2. On this background it is a need of time to cover the research areas interrelated with climate change.

4.1 Green Cover at SETI:

SETI has got a huge green cover and has almost 50 species of vegetation inside the campus. The institute has 22 acres of campus and most of this is covered by green area. They have a huge plantations and structural components are Main building, office section, mess, Block A, Block B, Block C and Block D etc.

Figure 4-1 SETI, Campus

SETI has taken huge efforts to develop its green cover. The institute has about 8.59 acres of green cover. In the vicinity of the institute there are about approximately 805 fully grown trees and more than a 1522 growing plants. The above table shows some of the common tree species found. Institute has agriculture cover approximately about 4.81 acres in plantation.

| Sr. No. | Species |
|---------|-------------------------|
| 1 | Caesalpinia pulcherrima |
| 2 | Tribulus terrestris |
| 3 | Vachellia nilotica |
| 4 | Rotheca serrata |
| 5 | Lavandula bipinnata |
| 6 | Barleria cristata |
| 7 | Fox Brush Orchid |

Mostly there are trees of Tamarind, mango, neem, ferns etc. Due to this the institute has high carbon sequesterial values. Considering the vicinity some dry plants were observed to approximately about 33. Plants absorb sunlight, 50% is absorbed and 30% reflected so this helps to create a cooler and more pleasant climate through a 3°C temperature reduction in the vicinity. This has also leaded to increase in biodiversity as more than 18 species of birds were observed. Some off the common birds were viz. Sparrow, wild parrots, little stint, black kite etc.

4.2 Carbon Footprint Audit:

SETI has estimated its carbon footprint by factor methodology. Various factors were used to estimate the carbon emissions from Consumption of electricity, generation of solid waste, use of vehicles in campus, carbon emissions due to human breathing and emissions from buildings. At last they have also calculated Carbon sequesterial value i.e. carbon that is absorbed by the plants.

| Sr. No. | Month | Units | Demand | CO2 emitted (KgCO2 eq.) |
|---------|--------|-------|--------|----------------------------|
| 1 | Mar 22 | 44358 | 144 | 36373.56 |
| 2 | Apr 22 | 38749 | 156 | 31774.18 |
| 2 | May 22 | 30616 | 156 | 25105.12 |
| 3 | Jun 22 | 38508 | 156 | 31576.56 |
| 4 | Jul 22 | 61325 | 156 | 50286.5 |
| 5 | Aug 22 | 55957 | 156 | 45884.74 |
| 6 | Sep 22 | 42201 | 156 | 34604.82 |
| 7 | Oct 22 | 43564 | 156 | 35722.48 |
| 8 | Nov 22 | 43284 | 156 | 35492.88 |
| 9 | Dec 22 | 53421 | 156 | 43805.22 |
| 10 | Jan 23 | 50340 | 156 | 41278.8 |
| 11 | Feb 23 | 49726 | 156 | 40775.32 |

Hence as per the calculation the average unit consumption considering all the months is about 46004.08 units and the carbon emission is 37723.34 kg CO2 eq./year.

Secondly considering emissions from human breathing, the institute has total 956 students. Institute has special boys and girls hostel. Considering all the staff viz. Junior teachers, senior teachers, Non grant, grant CHB they are total of 55. The staff works for about averagely 6 hours a day in the institute and the students are present for 4 hours averagely daily.

Vehicles emit significant amount of gases in environment and SETI has various parking sections in the campus. It was found that averagely 177 vehicles entered the institute daily and travel about 200 m of distance from the gate. Cars also enter the institute and as per observation 12 cars are observed daily. Hence, emission from 2 wheelers is 941.6 g/km CO2 eq. considering petrol and diesel cars the emission are 271.2 g/km CO2 eq. Overall the institute emits 242.56 Kg CO2 eq. per year.

Solid waste is very important as it emits significant amount of carbon through it. SETI has a good solid waste management system. Hence the institute develops about 1355 kg of waste

daily in both the form of wet and dry. Hence for non-residing persons the emissions are 1171.67 kg CO2 eq. per day and for 141 resident students they are 55.23 kg CO2 eq. per day. Overall for an year the generation is about 23.43 ton CO2 eq. per year.

Buildings play an important role in carbon contribution. During the construction operation and use phase they emit significant amount of carbon. Hence considering total built-up area the carbon emissions could be evaluated. After the estimation the total built-up area observed was approximately about 5061 sq. m and the carbon emission were 1012.20 kg CO2 eq. per year.

Carbon sequesterial in important as it is the carbon absorbed by the trees. SETI campus has 805 fully grown trees and 1522 growing trees. Hence the carbon absorbed by both this trees is 27180 kg CO2 eq. per year.

| Sr. No. | Section | Emission |
|---------|-------------------------------|---------------------------------|
| 1 | Emission from electricity | 37723.34 kg CO2 eq./year. |
| 2 | Emission from solid waste | 23.43 ton CO2 eq. per year. |
| 3 | Emission from Vehicles | 242.56 Kg CO2 eq. per year. |
| 4 | Emission from human breathing | 63.75 tons of CO2 eq. per year. |
| 5 | Emission from buildings | 1012.20 kg CO2 eq. per year. |
| 6 | Carbon sequesterial | 288156 kg CO2 eq. per year. |

Hence overall carbon data for SETI is mentioned below.

4.3 Conclusion:

- Highest carbon emission was observed from human breathing i.e. 63.75 tons of CO2 eq. per. Year. There is no any significant mean to reduce this number as it is not controllable.
- The next is solid waste. The emission from solid waste comprises of 23.43 ton CO2 eq. per year. This can be significantly reduced by following simple means. Waste segregation is properly observed by the institute and they should follow the cut out plastic plans. There should be complete ban in using the plastic inside the campus. There should be minimization of food waste as it contributes highest in carbon emissions.
- Considering emission from electricity they can be significantly reduced by decrease in electricity use. This can be done by installing LED lights and using energy efficient

equipment's such as machines with high star ratings which save more. Institute can recognize renewable energy sources and have a setup in the institute. This can lead in significant saving of electricity and reduction in carbon emissions.

- Vehicles have the least emissions in SETI and it is due to the easy approached parking so that vehicles do not roam in the vicinity. All the vehicles travel hardly 350 m in the campus and tis has led to lower emissions. Still institute can follows "NO Vehicle Day" on every 2nd Saturday of each month.
- Institute reduces about 2.88 tons of CO2 per year by the means of plants. This could be increased by increasing in plantations. SETI can plant more trees next to chemistry section, surrounding to play ground, front of applied science department etc.
- The plants having highest Carbon sequestration values are suggested. Cinnamomum verum, Eugenia caryophyllid, Bumelia celestina, Acacia Berland Eri, Acacia Francescana, Chinaberry tree, Moringa oleífer, Carya illusoriness, Pinus Arizonian and Buddleia cordata are some of the suggested species for plantation.

ENVIRONMENT AUDIT

Signature Not Verified SANJEEV Environmental and Civil Engineering Solutions, Sangle Sangle Solutions, Sangle Solutions,

5. Environmental Audit:

An environmental audit is a type of evaluation intended to identify environmental compliance and management system implementation gaps, along with related corrective actions. ISO 14001 is a voluntary international standard for environmental management systems ("EMS"). ISO 14001:2004 provides the requirements for an EMS and ISO 14004 gives general EMS guidelines. An EMS meeting the requirements of ISO 14001:2004 is a management tool enabling an organization of any size or type to:

- Identify and control the environmental impact of its activities, products or services;
- Improve its environmental performance continually, and
- Implement a systematic approach to setting environmental objectives and targets, to achieving these and to demonstrating that they have been achieved.

The audit examines the potential hazards or risks posed by the institutes. Areas examined may include environmental policies and procedures, energy use practices, recycling, waste, conservation, and pollution. Then, the institute can use the results to determine what changes need to be made for compliance. In a broad sense, environmental auditing aims to help protect the environment and minimize the risks of business activities to the environment and human safety and health.

5.1 Water Audit and wastewater audit:

Water auditing is a method of quantifying water flows and quality in systems, with a view to reducing water usage and often saving money on otherwise unnecessary water use. Water audit is an effective management tool for minimizing losses, optimizing various uses and thus enabling considerable conservation of water. Water audits trace water use from its point of entry into the facility/system to its discharge into the sewer/river/canal etc. Wastewater audit deals with effective management of wastewater in the system. It deals with proper generation, management, treatment, transfer and disposal of wastewater.

SETI has carried out its water and wastewater audit and has suggested many more ways for water conservation, reuse and recycle. The detail water and waste water report is mentioned below.

5.2 Water Audit report:

Water audit for the "SETI" was carried out. The purpose of the water audit is to provide a thorough understanding of the water uses by identifying and measuring all water using fixtures, appliances, and practices in order to recommend potential water saving efficiencies.

PRIMARY DATA

| Sr. No. | Title | Information | |
|---------|--|---|--|
| 1 | Name of Institute | SETI | |
| 2 | Address | Panhala | |
| 4 | Name of company under which water audit is carried out | Environmental and Civil Engineering Solutions, Sangli | |
| 6 | Number of floors | G + 2 | |
| 7 | Category of building | Educational Institute | |
| 8 | Nearest ESR location | Campus | |
| 9 | Water supply hours | 6 hrs. daily | |
| 10 | Water meter present | Yes | |

POPULATION DETAILS

| Title | Information |
|--|-------------|
| Fixed population (Working staff and | Gents: 766 |
| Students) | Ladies: 245 |
| Variable population (Visiting persons) | Gents: 15 |
| | Ladies: 12 |

SOURCE INFORMATION

| Title | Information | |
|--------------------|---|--|
| Sources of water | River water pumping | |
| Connection details | 1" PVC pipe inlet and 1" outlet distribution pipe | |

STORAGE DETAILS

| Title | Information |
|------------------------------|-----------------------------|
| Overhead tank type | PVC tank |
| Location | On terrace |
| | Section A: 1 X 2000 lit PVC |
| | Section B: 4 X 2000 lit PVC |
| Number of tanks | Section C: 3 X 2000 lit PVC |
| | 2 X 1000 lit PVC |
| | Section D: 2 X 1000 lit PVC |
| Motor connection details | 2 Hp for pumping |
| Pumping period | 4 hours daily |
| Underground sump | No |
| Capacity of underground sump | NA |

WATER USAGE

| Toilet | Number of users | Water consumption |
|-----------------|-----------------|-----------------------|
| Gents toilet | 766 users | 766 X 10 lit = 7660 |
| Washbasin | 1011 users | 1011 X 0.75 lit = 759 |
| Ladies toilet | 245 users | 245 X 12 lit = 2940 |
| Toilet cleaning | 600 liters | 600 liters |
| Floor cleaning | 500 liters | 500 liters |
| Gardening | 1500 liters | 1500 liters |
| Laboratories | 1000 liters | 1000 liters |
| Total | | 14,959 lit |

WATER CONSUMPTION IN HOSTEL

Considering 135 LPCD there are 141 boys and girls in hostel section. Hence, 141 X 87 is 12,267 liters.

WATER USED FOR DRINKING

There are coolers cum water purifiers present in the institute. Sample assessment for 3 months was done and average values are presented below for each section.

Potable water assessment:

Section 1

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 6.6-7.1 | 6.5-8.5 |
| 2 | TDS | 111 | - |

5.3 Waste water audit:

SETI campus generates huge amount of wastewater. The source for wastewater in the campus is hostels, institute, mess and the washrooms and urinals inside the campus. To estimate the amount of wastewater generated all the water that is used in the washrooms, quarters and hostels is considered as wastewater.

| Sr. No. | Section | Wastewater |
|---------|---------------------------------|------------|
| 1 | XX 7 4 1 • | |
| 1 | Waste usage generated in campus | 14,959 |
| 2 | Hostel water usage | 12,267 |
| | Total | 27,226 |
| | Waste water generated | 20,419.5 |

5.4 Waste water treatment plant at SETI:

Currently SETI lets all it waste water into sewers and some of the waste water is disposed at the back of chemistry department. Currently there is no any waste treatment facility. Sampling of waste water was done for 3 months for the parameters of COD, BOD, TKN and pH. Following table shows the characterization of wastewater.

| Sr. No. | Parameter | Reading |
|---------|-----------|---------|
| 1 | pН | 7.11 |
| 2 | COD | 208 |
| 3 | BOD | 101 |
| 4 | TKN | 25 |

5.5 Solid waste Audit:

A waste audit is a physical analysis of waste composition to provide a detailed understanding of problems, identify potential opportunities, and give you a detailed analysis of your waste composition. A waste audit will help you clearly identify your waste generation to establish baseline or benchmark data, Characterize and quantify waste stream, Verify waste pathways, identify waste diversion opportunities and identify source reduction opportunities.

Solid waste is the unwanted or useless solid material generated from the human activities in residential, industrial or commercial area. Solid waste management reduce or eliminates the adverse impact on the environment and human health. Solid waste audit for SETI was carried out. The entire premise was analysed for solid waste generation and waste characterization. Overall waste was observed and characterization was done. The above table shows the components of solid waste at SETI campus. Quartering method was used and 1 Kg of waste was selected.

| Sr. No. | Type of waste | Composition % |
|---------|------------------|---------------|
| 1 | Plastic | 41 |
| 2 | Paper | 27 |
| 3 | Rubber | 2 |
| 4 | Food | 11 |
| 5 | Glass | 1 |
| 6 | Metals | 1 |
| 7 | Garden trimmings | 16 |
| 8 | Cloth and fibre | 1 |

After analysing all the bins it was observed that plastic had highest contribution viz. 41% followed by the paper waste i.e. 27%. Mostly common observed plastic items were plastic wrappers of chips, soft drinks bottles and chocolate wrappers. The paper waste included paper wrappers, notebook pages, pamphlets and some pieces of cardboard. The third highest waste included garden trimmings. It included small grass, minute branches etc. The least contribution was of cloth, fibre, glass and metals.

Institute follows good practices regarding separate bin system, and the bins are even marked. There are 2 separate bins present in campus viz. black bins for wet waste and green bins for dry waste. Considering applied science section they have places yellow bins for wet waste and green bins for dry waste.

Green, Energy and Environment Audit Report 2022-2023

5.6 Observations and Conclusion:

- There are separate bins for wet waste and dry waste. Hence, source segregation takes place.
- Institute has taken steps towards paper recycling. The paper waste collected from the bins is send to vendors.
- Plastic ban in campus is implemented but due to lack of seriousness in the students plastic is used in campus. Institute should conduct plastic awareness seminars for both the staff and students.

Sr. No. Test Results 1 pH 6.1 2 NPK 2:3:1 3 Acidity 137 mg/lit 4 Hardness 170 mg/lit

Assessment of soil was done to determine the quality of soil:

5.7 Ambient Air Audit:

Ambient air quality refers to the condition or quality of air surrounding us and in the outdoors. National Ambient Air Quality Standards are the standards for ambient air quality set by the Central Pollution Control Board (CPCB) that is applicable nationwide. The CPCB has been conferred this power by the Air (Prevention and Control of Pollution) Act, 1981. Hence, auditing this ambient air quality is stated as ambient air audit.

SETI has carried out its ambient air audit at various locations in the premises. Air quality detector machine PS-21185 was used for air audit. Parameters viz. SOx, NOx, RSPM and Air quality were assessed. Following google earth pro images shows the assessed locations.

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |

Green, Energy and Environment Audit Report 2022-2023

| 7 | Point No 7 | Classroom 3 |
|----|-------------|-------------|
| 8 | Point No 8 | Block 1 |
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of air quality monitoring:

| Point No | Location | SOx | NOx | RSPM | Quality |
|----------|--------------|-------|-------|-------|---------|
| | CPCB Limits | 80 | 80 | 80 | - |
| | | μg/m3 | μg/m3 | μg/m3 | |
| 1 | Gate entry | 33 | 42 | 66 | Good |
| 2 | Passage | 10 | 11 | 38 | Fresh |
| 3 | Office | 11 | 8 | 31 | Good |
| 4 | Drawing hall | 8 | 12 | 27 | Fresh |
| 5 | Classroom 1 | 11 | 15 | 22 | Fresh |
| 6 | Classroom 2 | 11 | 22 | 10 | Fresh |
| 7 | Classroom 3 | 10 | 18 | 19 | Good |
| 8 | Block 1 | 10 | 10 | 11 | Good |
| 9 | Block 2 | 9 | 11 | 22 | Good |
| 10 | Block 3 | 14 | 5 | 18 | Good |
| 11 | Block 4 | 13 | 18 | 19 | Good |
| 12 | Open air | 20 | 17 | 49 | Good |
| 13 | Library | 11 | 10 | 21 | Fresh |
| 14 | Study room | 10 | 17 | 22 | Fresh |

Conclusion and recommendations:

• After assessing the air quality all the results are within the limits. Considering the RSPM i.e. respirable dust particulate matter highest was observed at the gate entrance.

This is due to the present of small dust particles from the open ground. The second highest was observed in passages.

- Considering the SOx and NOx, it is mainly due to vehicle exhaust. Hence the highest was observed at the main gate entrance since many vehicles from public and college travel.
- There are some measures commonly need to follow such as Ban on open solid waste burning in campus and ban on grass burning in summer season.

5.8 Ambient Noise audit:

Ambient sound in relation to audio refers to the background noise present at a given scene or a location. This can include noises such as rain, traffic, crickets, birds, etc. Ambient sound levels are often measured in order to map sound conditions over a specific time to understand their variation with locale and various points. Ambient noise level is measured with a sound level meter. It is usually measured in Decibel (dB).

Three points were selected based on best suitable requirement for noise monitoring. RS-2250 instrument was used. Monitoring was carried out 3 times in a day for 3 months. Readings were collected in morning section, afternoon section and evening section. In addition to this monitoring was also carried out in library section, study room section, classrooms, tutorial rooms and laboratories.

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |
| 7 | Point No 7 | Classroom 3 |
| 8 | Point No 8 | Block 1 |
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of noise assessment:

All the values are in decibels. Assessment values present average of 3 months data and the last column present the final average of morning noon and evening.

| Point No | Location | Morning | Noon | Evening | Average |
|----------|--------------|---------|-------|---------|---------|
| 1 | Gate entry | 65.23 | 80.67 | 60.45 | 68.78 |
| 2 | Passage | 53.93 | 63.40 | 50.50 | 55.94 |
| 3 | Office | 60.77 | 65.44 | 70.70 | 65.64 |
| 4 | Drawing hall | 40.02 | 46.23 | 39.45 | 41.90 |
| 5 | Classroom 1 | 31.34 | 39.04 | 31.45 | 33.94 |
| 6 | Classroom 2 | 35.94 | 41.77 | 33.73 | 37.15 |
| 7 | Classroom 3 | 35.80 | 37.00 | 35.87 | 36.22 |
| 8 | Block 1 | 41.47 | 49.14 | 42.04 | 44.22 |
| 9 | Block 2 | 40.46 | 44.84 | 42.67 | 42.66 |

Green, Energy and Environment Audit Report 2022-2023

| 10 | Block 3 | 41.03 | 41.26 | 39.99 | 40.76 |
|----|------------|-------|-------|-------|-------|
| 11 | Block 4 | 42.67 | 44.51 | 38.73 | 41.97 |
| 12 | Open air | 55.96 | 51.52 | 50.67 | 52.72 |
| 13 | Library | 33.98 | 30.14 | 30.57 | 31.56 |
| 14 | Study room | 30.82 | 31.48 | 30.45 | 30.92 |

Conclusion and recommendations:

- As per the rules defined by CPCB the limit standards set for institutes regarding noise emissions are restricted to 50 Decibels.
- Considering the average data highest noise emission were observed at main gate entrance, passage, office and open air. This is due to more wide open spaces and echo of sound.
- The lowest emission was observed at the library and study room section. SETI has followed good practices regarding discipline in library section.
- Some common suggestions such as, installing sign boards in campus regarding provision of mobiles, setting up rules for students regarding premises and canteen utilization.

Environmental and Civil Engineering Solutions, Sangle Charles and Civil Engineering Solutions, Sangle Charles and Civil Engineering

6. Energy Audit:

An energy audit is an inspection survey and an analysis of energy flows for energy conservation in a building. It may include a process or system to reduce the amount of energy input into the system without negatively affecting the output. In commercial and industrial real estate, an energy audit is the first step in identifying opportunities to reduce energy expense and carbon footprint.

A nation is tiring to advance in quantity and quality to the spread of education among the common India and development of their intelligence. In India the entire field of education and other fields of intelligent activities had been monopolized by a handful of men before independence. But today we are marching towards the desirable status of a developed nation with fast strides. But the development should be a sustained one. For achieving such an interminable development energy management is essential. As far as concerning electricity crisis, we are facing lack of electricity during office work. So, institutional management is taking design regarding production of electricity and saving electricity for Eco social aspect. Energy requirement of India is growing and incomplete domestic fossil fuel treasury. The country has motivated strategy to enlarge its renewable energy resources and policy to establish the nuclear power plants. India increases the involvement of nuclear power to largely electrical energy development facility from 4.2% to 9%. India's industrial demand accounted for 35% of electrical power requirement, domestic household use accounted for 28%, agriculture 21%, commercial 9%, and public lighting and other miscellaneous applications accounted for the rest. Energy conservation means reduction in energy consumption without making any sacrifice of quantity or quality. A successful energy management program begins with energy conservation; it will lead to adequate rating of equipment's, using high efficiency equipment and change of habits which causes enormous wastages of energy. By observing all these study lack of electricity and huge electricity demands. It is necessary to plan to be self-sufficient in electricity requirement.

6.1 Connection details:

Institute receives electricity from MSEB i.e. Maharashtra State Electricity Distribution Co. Ltd. Following are the details about connection.

- **Type of connection:** HT
- Tariff: 146 HT-VIII B

- Sanctioned load: 300.00 KW
- Contract demand: 240.00 KVA
- Feeder voltage: 11 KV

Tariff Structure:

As per Maharashtra State Electricity Distribution Company Limited, HT and LT consumers have an option to take Time of Day (TOD) tariff instead of the normal tariff. Under TOD tariff electricity consumption and maximum demand in respect of HT consumers for different periods of the day i.e. normal period, peak load period and off-peak load period could be recorded by installing TOD meter. The maximum demand and consumption recorded in different periods could be billed on the following rates of the tariff applicable.

| TOD Tariffs | Rate % (Rs./Unit) |
|---|-------------------|
| 0000 Hrs- 0600 Hrs & 2200 Hrs- 2400 Hrs | -1.500 |
| 0600 Hrs- 0900 Hrs & 1200 Hrs- 1800 Hrs | 0.000 |
| 0900 Hrs- 1200 Hrs | 0.800 |
| 1800 Hrs- 2200 Hrs | 1.100 |

Power Factor:

Power Factor (PF) is an indicator of efficient utilization of power. In an AC (Alternating Current) electrical power system, PF is defined as the ratio of real power flowing to the load, to the apparent power in the circuit and is a dimensionless number.

6.2 Bill analysis:

| Sr. No. | Month | Consumption (Kw) | Demand (KVA) | Bill Amount |
|---------|--------------|------------------|--------------|-------------|
| 1 | April 22 | 44358 | 144 | 454592 |
| 2 | May 22 | 38749 | 156 | 392193 |
| 3 | June 22 | 30616 | 156 | 529082 |
| 4 | July 22 | 38508 | 156 | 773770 |
| 5 | August 22 | 61325 | 156 | 719531 |
| 6 | September 22 | 55957 | 156 | 560932 |
| 7 | October 22 | 42201 | 156 | 576616 |
| 8 | November 22 | 43564 | 156 | 562508 |
| 9 | December 22 | 43284 | 156 | 674664 |
| 10 | January 23 | 53421 | 156 | 653432 |
| 11 | February 23 | 50340 | 156 | 643603 |
| 12 | March 23 | 49726 | 156 | 684781 |

Bill analysis for SETI had been done for academic year 2022-2023.

Average units consumed were about 46004.08 and the average cost was about 602142 Rs.

6.3 Equipment Details:

6.4 ILER analysis:

Lighting is provided in industries, commercial buildings, indoor and outdoor for providing comfortable working environment. The primary objective is to provide the required lighting effect for the lowest installed load i.e. highest lighting at lowest power consumption. The purpose of performance test is to calculate the installed efficacy in terms of lux/watt/m² (existing or design) for general lighting installation. The calculated value can be compared with the norms for specific types of interior installations for assessing improvement options.

| Range | Condition |
|-------------|--------------------------------|
| 0.5 or less | Urgent activity required (UAR) |
| 0.51 - 0.70 | Review Suggested (RS) |
| 0.70- above | Good |

ILER analysis for various sections in SETI were carried out. Firstly using LUX meter illumination was measured and then numerical analysis was carried out. ILER gives idea about lighting conditions and measured regarding improving them.

Main Building analysis

| Sr. No. | Section | LUX reading | ILER | Condition |
|---------|---------------|-------------|------|-----------|
| 1 | Library | 166 | 0.71 | Good |
| 2 | Study room | 124 | 0.71 | Good |
| 3 | Classroom S1 | 128 | 0.46 | UAR |
| 4 | Classrooms S2 | 107 | 0.58 | RS |
| 5 | Laboratories | 147 | 0.84 | Good |
| 6 | Office | 166 | 0.74 | Good |

Other section

| Sr. No. | Section | LUX reading | ILER | Condition |
|---------|---------------|-------------|------|-----------|
| 1 | Staff room | 122 | 0.56 | RS |
| 2 | Classrooms | 154 | 0.71 | Good |
| 3 | Laboratories | 124 | 0.78 | Good |
| 5 | Computer tabs | 188 | 0.52 | RS |

Reasons for Good ILER:

- Proper placement of windows and doors so that natural light is available well.
- Good ventilation system.

Use of LED bulds:

Institute has toatl light load connection of : 46500 watts

LED load connection is: 32300 watts

Light load other than LED: 14200 watts

Percentage of LED use in institute: 69.46%

Alternatice methods of energy:

Solar power plant at SETI

Capacity of plant: 70kw

Hybrid grid: (Solar + Wind): 50kw

Total capacity: 70+50 = 120 kw

Hybrid Generation during year 2021-2022

| Month | PF | Units generated |
|--------------|------|-----------------|
| April 21 | 0.94 | 28145 |
| May 21 | 0.92 | 15197 |

| 10 | Generator | Kirloskar | 82.5 KVA | 1 |

7. Observations and Conclusions:

This section gives the overviews of all the audits.

1. Water Section:

Institute has provision of rain water harvesting; hence huge amount of water is conserved and saved. Another good point is that the rain water collected at various section and is used to ground.

2. Wastewater Section:

SETI doesn't have any wastewater treatment facility till now as all the waste is directly sent to sewers. But the institute has planned for CWs i.e. constructed wetland systems for both the grey and black water treatment. Institute has also planned for hazardous waste management. The waste water generated through chemistry lab will also be treated and then led of onto sewers.

3. Solid waste management:

Proper method such as separate bins for wet waste and dry waste which leads to source segregation is followed by SETI.

4. E-waste:

Electronic waste is generated from many sections viz. physics lab, computer lab and applied science section. Institute collets the E waste centrally and is send to vendors for proper disposal means.

5. Sustainable water practices:

Institute has a fresh source of water i.e. river water. Water is recycled and used.

6. Energy:

Institute has followed good means by installing sustainable source of energy viz. solar energy and wind power generation. They have taken good measures by installing LED lights and solar sensor lights in the campus which are proving to be energy efficient.

AUDIT REPORT

2021-2022

ISO 9001: 2015, IEC 17025: 2017

Signature Not Verified SANJEEV Digtally Signed By SANJEEV NATVAR NATVAR JAIN PASANJEEVAN Signe Ering &

Editorial

In the Era of global warming and climate change every citizen has to reduce their own carbon foot prints to tackle with the adverse impacts of climate change. A green audit of any academic institution revels ways in which we can reduce energy consumption, water use and reduction in emission of carbon dioxide in the environment. It is a process to look into and ask ourselves whether we are also contributing to the degradation of the environment and if so, in what manner and how we can minimize this contribution and bring down to zero and preserve our environment for future generation.

Sanjeevan Engineering & Technology Institute administration has already taken a step towards the green approach and conducted green audit of campus in the year 2022. As an outcome of this institute has taken green steps to reduce its carbon foot prints by several means in campus viz. sustainable fittings, tree plantation and green computing in the administration and examination. The responsibility of carrying out the scientific green audit was given to Environmental and Civil Engineering Solutions. The organization has followed the rules and regulation of Ministry of Environment and Forest, Govt. of India and Central Pollution Control Board, New Delhi.

A questionnaire was prepared based on the guidelines and format of CPCB, New Delhi to conduct green audit. The information related to consumption of resources like water, electricity and handling of solid and hazardous waste was collected in the formats from main building support services and departments. The data collected was grouped and was tabulated in Excel sheets and analysed. The graphs of the analysed data were prepared for getting quick idea of the status. Interpretation of the overall outcomes was made which incorporates primary and secondary data, references and interrelations within. Final report preparation was carried out using this interpretation to prepare environment management plan of institute for next two years.

During the preparation of the Audit Report Hon. Principal, Hon. Vice Principal encouraged us with their full support. Registrar, Director, IQAC, Deans of faculties, and other officers of the institute were also given support to carry out this work. All Heads of the department, Directors, Co-ordinators, In-charge of the support services and engineering section of the university also gave full co-operation.

I hope the efforts made will be helpful for university to take one green step ahead.

Nikhil N. Kamble (C.E.O and Head)

1. Introduction:

The modernization and industrialization are the two important outputs of twentieth century which have made human life more luxurious and comfortable. Simultaneously, they are responsible for voracious use of natural resources, exploitation of forests and wildlife, producing massive solid waste, polluting the scarce and sacred water resources and finally making our mother Earth ugly and inhospitable. Today, people are getting more familiar to the global issues like global warming, greenhouse effect, ozone depletion and climate change etc. Now, it is considered as a final call by mother Earth to walk on the path of sustainable development. The time has come to wake up, unite and combat together for sustainable environment.

Considering the present environmental problems of pollution and excess use of natural resources, Hon. Prime Minister, Shri. Narendra Modiji has declared the Mission of Swachch Bharat Abhiyan. Also, University Grants Commission has mentioned "Green Campus, Clean Campus" mission mandatory for all higher educational institutes. As environmental sustainability is becoming an increasingly important issue for the nation, the role of higher educational institutions in relation to environmental sustainability is more prevalent.

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

1.1 Need of audit:

Green auditing is the process of identifying and determining whether institutions practices are eco-friendly and sustainable. Traditionally, we are good and efficient users of natural resources. But over the period of time excess use of resources like energy, water, chemicals are become habitual for everyone especially, in common areas. Now, it is necessary to check

> Signature Not Verified SANJEEV Digraily Signed By SAUSEV NATVAR NATVAR JAIN ANN S DesaDieEvan SolicieErving &

whether our processes are consuming more than required resources? Whether we are handling waste carefully? Green audit regulates all such practices and gives an efficient way of natural resource utilization. In the era of climate change and resource depletion it is necessary to verify the processes and convert it in to green and clean one. Green audit provides an approach for it. It also increases overall consciousness among the people working in institution towards an environment.

1.2 Goals of audit:

Institute has conducted a audit with specific goals as:

- 1. Identification and documentation of green practices followed by university.
- 2. Identify strength and weakness in green practices.
- 3. Conduct a survey to know the ground reality about green practices.
- 4. Analyse and suggest solution for problems identified from survey.
- 5. Assess facility of different types of waste management.
- 6. Increase environmental awareness throughout campus.
- 7. Identify and assess environmental risk.
- 8. Motivates staff for optimized sustainable use of available resources.
- 9. The long term goal of the environmental audit program is to collect baseline data of environmental parameters and resolve environmental issue before they become problem.

1.3 Objectives of Audit:

- 1. To examine the current practices which can impact on environment such as of resource utilization, waste management etc.
- 2. To identify and analyse significant environmental issues.
- 3. Setup goal, vision and mission for Green practices in campus.
- 4. Establish and implement Environmental Management in various departments.
- 5. Continuous assessment for betterment in performance in green practices and its evaluation.
- 6. To prepare an Environmental Statement Report on green practices followed by different departments, support services and administration building.

1.4 NAAC criteria VII Environmental Consciousness:

Institutes are playing a key role in development of human resources worldwide. Higher education institutes campus run various activities with aim to percolate the knowledge along with practical dimension among the society. Likewise different technological problems higher education institutes also try to give solution for issues related to environment. Different types of evolutionary methods are used to assess the problem concerning environment. It includes Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), Carbon Footprint Mapping, Green audit etc

National Assessment and Accreditation Council (NAAC) which is a self-governing organization that declares the institutions as Grade according to the scores assigned at the time of accreditation of the institution. Green Audit has become mandatory procedure for educational institutes under Criterion VII of NAAC. The intention of green audit is to upgrade the environmental condition inside and around the institution. It is performed by considering environmental parameters like water and wastewater accounting, energy conservation, waste management, air, noise monitoring etc. for making the institution more eco-friendly.

Students are the major strength of any academic institution. Practicing green actions in any educational institution will inculcate the good habit of caring natural resources in students. Many environmental activities like plantation and nurturing saplings and trees, Cleanliness drives, Bird watching camps, No vehicle day, Rain water harvesting, etc. will make the students good citizen of the country. Through Green Audit, higher educational institutions can ensure that they contribute towards the reduction of Global warming through Carbon Footprint reduction measures.

1.5 Benefits of Green Audit to an Educational Institute:

There are many advantages of green audit to an Educational Institute:

- 1. It would help to protect the environment in and around the campus.
- 2. Recognize the cost saving methods through waste minimization and energy conservation.
- 3. Find out the prevailing and forthcoming complications
- 4. Empower the organization to frame a better environmental performance.
- 5. It portrays good image of institution through its clean and green campus.

2. Overview of Institute:

The Sanjeevan Engineering & Technology Institute, Panhala was established in the year of 1994. Institute has huge area of 13 acres and has been serving the mankind in the field science and technology.

The landscaped grounds of college are widely admired for their beauty. The most valuable investment any educational institution can make is "Nurturing Future Leaders". With the continuous rise in expectation of essential leadership standards, the institute has torch bearers have taken a responsibility for this investment to nurture the NextGen leaders with a vision to bridge the existing skill gap. With a firm step forward to attain an academic excellence, several Centres of Excellence, computer labs, and industry-academia associations have been setup at the College in association with the top leaders. The College believes that its primary stakeholders are the students. All aspects of education focus on the core values of contributing to national development while fostering global competencies among students. The College admits students from all social milieus and empowers them through intensive mentoring and counselling to face the challenges of life and become responsible and sensitized citizens of the country.

3. Methodology:

3.1 Audits to be carried out:

- Green and carbon footprint audit
- Energy audit
- Environmental audit
 - Water audit
 - Wastewater audit
 - \circ Solid waste audit
 - o Ambient noise audit
 - o Ambient air audit

4. Green and Carbon footprint audit:

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

Carbon is the basis of life on mother Earth. It is incorporated into the plants through photosynthesis, consumed by animal species through the food, present in the form of carbon dioxide (CO2) the atmosphere, locked into the rocks as limestone and compressed into the different fossil fuels such as coal and oil. As CO2 level in the atmosphere continue to increase, most climate designs or project that the oceans of the world and trees will keep soaking up more than half CO2. The plants on land and in the sea, taken up carbon by over many years increased the percentage discharged during decay, and this increased carbon became locked away as fossil fuels beneath the surface of the planet. The starting of the 21st century brought growing concern about global warming, climate change, food security, poverty and population growth. In the 21st century more carbon has been released into the atmosphere than that has been absorbed. CO2 is a principle component causing global warming. Atmospheric carbon dioxide levels have increased to 40 % from preindustrial levels to more than 390 parts per million CO2. On this background it is a need of time to cover the research areas interrelated with climate change.

4.1 Green Cover at SETI:

SETI has got a huge green cover and has almost 50 species of vegetation inside the campus. The institute has 22 acres of campus and most of this is covered by green area. They have a huge plantations and structural components are Main building, office section, mess, Block A, Block B, Block C and Block D etc.

Figure 4-1 SETI, Campus

SETI has taken huge efforts to develop its green cover. The institute has about 8.59 acres of green cover. In the vicinity of the institute there are about approximately 800 fully grown trees and more than a 1500 growing plants. The above table shows some of the common tree species found. Institute has agriculture cover approximately about 4.86 acres in plantation.

| Sr. No. | Species |
|---------|-------------------------|
| 1 | Caesalpinia pulcherrima |
| 2 | Tribulus terrestris |
| 3 | Vachellia nilotica |
| 4 | Rotheca serrata |
| 5 | Lavandula bipinnata |
| 6 | Barleria cristata |
| 7 | Fox Brush Orchid |

Mostly there are trees of Tamarind, mango, neem, ferns etc. Due to this the institute has high carbon sequesterial values. Considering the vicinity some dry plants were observed to approximately about 38. Plants absorb sunlight, 50% is absorbed and 30% reflected so this helps to create a cooler and more pleasant climate through a 3°C temperature reduction in the vicinity. This has also leaded to increase in biodiversity as more than 18 species of birds were observed. Some off the common birds were viz. Sparrow, wild parrots, little stint, black kite etc.

4.2 Carbon Footprint Audit:

SETI has estimated its carbon footprint by factor methodology. Various factors were used to estimate the carbon emissions from Consumption of electricity, generation of solid waste, use of vehicles in campus, carbon emissions due to human breathing and emissions from buildings. At last they have also calculated Carbon sequesterial value i.e. carbon that is absorbed by the plants.

| Sr. No. | Month | Units | Demand | CO2 emitted (KgCO2 eq.) |
|---------|---------|--------|--------|----------------------------|
| 1 | Mar 21 | 51,872 | 132 | 69684.42 |
| 2 | Apr- 21 | 28,145 | 144 | 49975.72 |
| 2 | May 21 | 15,197 | 144 | 44467.78 |
| 3 | Jun 21 | 15,811 | 144 | 44011.86 |
| 4 | Jul 21 | 19,617 | 144 | 45250.88 |
| 5 | Aug 21 | 40,182 | 144 | 44070.08 |
| 6 | Sep 21 | 52,736 | 144 | 44518.62 |
| 7 | Oct 21 | 50,330 | 144 | 48775.24 |
| 8 | Nov 21 | 34,237 | 144 | 45290.24 |
| 9 | Dec 21 | 45,054 | 144 | 56281.52 |
| 10 | Jan 22 | 35,836 | 144 | 50455.42 |
| 11 | Feb 22 | 38,318 | 144 | 45097.54 |

Hence as per the calculation the average unit consumption considering all the months is about 35,611 units and the carbon emission is 29201 kg CO2 eq./year.

Secondly considering emissions from human breathing, the institute has total 1021 students. Institute has special boys and girls hostel. Considering all the staff viz. Junior teachers, senior teachers, Non grant, grant CHB they are total of 65. The staff works for about averagely 6 hours a day in the institute and the students are present for 4 hours averagely daily.

Vehicles emit significant amount of gases in environment and SETI has various parking sections in the campus. It was found that averagely 180 vehicles entered the institute daily and travel about 200 m of distance from the gate. Cars also enter the institute and as per observation 12 cars are observed daily. Hence, emission from 2 wheelers is 957.6 g/km CO2 eq. considering petrol and diesel cars the emission are 474.6 g/km CO2 eq. Overall the institute emits 286.44 Kg CO2 eq. per year.

Solid waste is very important as it emits significant amount of carbon through it. SETI has a good solid waste management system. Hence the institute develops about 1320 kg of waste

daily in both the form of wet and dry. Hence for non-residing persons the emissions are 1141.40 kg CO2 eq. per day and for resident students they are 49.29 kg CO2 eq. per day. Overall for an year the generation is about 17.69 ton CO2 eq. per year.

Buildings play an important role in carbon contribution. During the construction operation and use phase they emit significant amount of carbon. Hence considering total built-up area the carbon emissions could be evaluated. After the estimation the total built-up area observed was approximately about 5061 sq. m and the carbon emission were 1012.20 kg CO2 eq. per year.

Carbon sequesterial in important as it is the carbon absorbed by the trees. SETI campus has 800 fully grown trees and 1500 growing trees. Hence the carbon absorbed by both this trees is 26140 kg CO2 eq. per year.

| Sr. No. | Section | Emission |
|---------|-------------------------------|---------------------------------|
| 1 | Emission from electricity | 29201 kg CO2 eq./year. |
| 2 | Emission from solid waste | 17.69 ton CO2 eq. per year. |
| 3 | Emission from Vehicles | 286.44 Kg CO2 eq. per year. |
| 4 | Emission from human breathing | 65.03 tons of CO2 eq. per year. |
| 5 | Emission from buildings | 1012.20 kg CO2 eq. per year. |
| 6 | Carbon sequesterial | 26140 kg CO2 eq. per year. |

Hence overall carbon data for SETI is mentioned below.

4.3 Conclusion:

- Highest carbon emission was observed from human breathing i.e. 65.03 tons of CO2 eq. per. Year. There is no any significant mean to reduce this number as it is not controllable.
- The next is solid waste. The emission from solid waste comprises of 17.69 ton CO2 eq. per year. This can be significantly reduced by following simple means. Waste segregation is properly observed by the institute and they should follow the cut out plastic plans. There should be complete ban in using the plastic inside the campus. There should be minimization of food waste as it contributes highest in carbon emissions.
- Considering emission from electricity they can be significantly reduced by decrease in electricity use. This can be done by installing LED lights and using energy efficient

equipment's such as machines with high star ratings which save more. Institute can recognize renewable energy sources and have a setup in the institute. This can lead in significant saving of electricity and reduction in carbon emissions.

- Vehicles have the least emissions in SETI and it is due to the easy approached parking so that vehicles do not roam in the vicinity. All the vehicles travel hardly 350 m in the campus and tis has lead to lower emissions. Still institute can follows "NO Vehicle Day" on every 2nd Saturday of each month.
- Institute reduces about 2.6 tons of CO2 per year by the means of plants. This could be increased by increasing in plantations. SETI can plant more trees next to chemistry section, surrounding to play ground, front of applied science department etc.
- The plants having highest Carbon sequestration values are suggested. Cinnamomum verum, Eugenia caryophyllid, Bumelia celestina, Acacia Berland Eri, Acacia Francescana, Chinaberry tree, Moringa oleífer, Carya illusoriness, Pinus Arizonian and Buddleia cordata are some of the suggested species for plantation.

5. Environmental Audit:

An environmental audit is a type of evaluation intended to identify environmental compliance and management system implementation gaps, along with related corrective actions. ISO 14001 is a voluntary international standard for environmental management systems ("EMS"). ISO 14001:2004 provides the requirements for an EMS and ISO 14004 gives general EMS guidelines. An EMS meeting the requirements of ISO 14001:2004 is a management tool enabling an organization of any size or type to:

- Identify and control the environmental impact of its activities, products or services;
- Improve its environmental performance continually, and
- Implement a systematic approach to setting environmental objectives and targets, to achieving these and to demonstrating that they have been achieved.

The audit examines the potential hazards or risks posed by the institutes. Areas examined may include environmental policies and procedures, energy use practices, recycling, waste, conservation, and pollution. Then, the institute can use the results to determine what changes need to be made for compliance. In a broad sense, environmental auditing aims to help protect the environment and minimize the risks of business activities to the environment and human safety and health.

5.1 Water Audit and wastewater audit:

Water auditing is a method of quantifying water flows and quality in systems, with a view to reducing water usage and often saving money on otherwise unnecessary water use. Water audit is an effective management tool for minimizing losses, optimizing various uses and thus enabling considerable conservation of water. Water audits trace water use from its point of entry into the facility/system to its discharge into the sewer/river/canal etc. Wastewater audit deals with effective management of wastewater in the system. It deals with proper generation, management, treatment, transfer and disposal of wastewater.

SETI has carried out its water and wastewater audit and has suggested many more ways for water conservation, reuse and recycle. The detail water and waste water report is mentioned below.

5.2 Water Audit report:

Water audit for the "SETI" was carried out. The purpose of the water audit is to provide a thorough understanding of the water uses by identifying and measuring all water using fixtures, appliances, and practices in order to recommend potential water saving efficiencies.

PRIMARY DATA

| Sr. No. | Title | Information |
|---------|--|---|
| 1 | Name of Institute | SETI |
| 2 | Address | Panhala |
| 4 | Name of company under which water audit is carried out | Environmental and Civil Engineering Solutions, Sangli |
| 6 | Number of floors | G + 2 |
| 7 | Category of building | Educational Institute |
| 8 | Nearest ESR location | Campus |
| 9 | Water supply hours | 6 hrs. daily |
| 10 | Water meter present | Yes |

POPULATION DETAILS

| Title | Information | |
|--|-------------|--|
| Fixed population (Working staff and | Gents: 780 | |
| Students) | Ladies: 241 | |
| Variable population (Visiting persons) | Gents: 26 | |
| | Ladies: 22 | |

SOURCE INFORMATION

| Title | Information | |
|--------------------|---|--|
| Sources of water | River water pumping | |
| Connection details | 1" PVC pipe inlet and 1" outlet distribution pipe | |

STORAGE DETAILS

| Title | Information |
|------------------------------|-----------------------------|
| Overhead tank type | PVC tank |
| Location | On terrace |
| | Section A: 1 X 2000 lit PVC |
| | Section B: 4 X 2000 lit PVC |
| Number of tanks | Section C: 3 X 2000 lit PVC |
| | 2 X 1000 lit PVC |
| | Section D: 2 X 1000 lit PVC |
| Motor connection details | 2 Hp for pumping |
| Pumping period | 4 hours daily |
| Underground sump | No |
| Capacity of underground sump | NA |

WATER USAGE

| Toilet | Number of users | Water consumption |
|-----------------|-----------------|-----------------------|
| Gents toilet | 780 users | 780 X 10 lit = 7800 |
| Washbasin | 1021 users | 1021 X 0.75 lit = 766 |
| Ladies toilet | 241 users | 241 X 12 lit = 2892 |
| Toilet cleaning | 600 liters | 600 liters |
| Floor cleaning | 500 liters | 500 liters |
| Gardening | 1500 liters | 1500 liters |
| Laboratories | 1000 liters | 1000 liters |
| Total | | 15,058 lit |

WATER CONSUMPTION IN HOSTEL

Considering 135 LPCD there are 87 boys and girls in hostel section. Hence, 135 X 87 is 11745 liters.

WATER USED FOR DRINKING

There are coolers cum water purifiers present in the institute. Sample assessment for 3 months was done and average values are presented below for each section.

Potable water assessment:

Section 1

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 6.1-7.5 | 6.5-8.5 |
| 2 | TDS | 223 | - |
| 3 | E.C | 95 | - |
| 4 | Hardness | 140 | 200 |
| 5 | Chlorides | 111 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

Section 2

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 7.0-8.1 | 6.5-8.5 |
| 2 | TDS | 115 | - |
| 3 | E.C | 229 | - |
| 4 | Hardness | 178 | 200 |
| 5 | Chlorides | 130 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

Section 3

| Sr. No. | Test | Results | Limit |
|---------|----------|---------|---------|
| 1 | рН | 7.7-7.9 | 6.5-8.5 |
| 2 | TDS | 189 | - |
| 3 | E.C | 177 | - |

5.3 Waste water audit:

SETI campus generates huge amount of wastewater. The source for wastewater in the campus is hostels, institute, mess and the washrooms and urinals inside the campus. To estimate the amount of wastewater generated all the water that is used in the washrooms, quarters and hostels is considered as wastewater.

| Sr. No. | Section | Wastewater generated in litres |
|---------|--------------------------------|-----------------------------------|
| 1 | Wastewater generated in campus | 10559.5 |
| 2 | Hostel boys | 4252 |
| 3 | Hostel girls | 3969 |
| | Total | 18781 |

5.4 Waste water treatment plant at SETI:

Currently SETI lets all it waste water into sewers and some of the waste water is disposed at the back of chemistry department. Currently there is no any waste treatment facility. Sampling of waste water was done for 3 months for the parameters of COD, BOD, TKN and pH. Following table shows the characterization of wastewater.

| Sr. No. | Parameter | Reading |
|---------|-----------|---------|
| 1 | pН | 7.45 |
| 2 | COD | 200 |
| 3 | BOD | 90 |
| 4 | TKN | 21 |

Audit Report 2021-2022

5.5 Solid waste Audit:

A waste audit is a physical analysis of waste composition to provide a detailed understanding of problems, identify potential opportunities, and give you a detailed analysis of your waste composition. A waste audit will help you clearly identify your waste generation to establish baseline or benchmark data, Characterize and quantify waste stream, Verify waste pathways, identify waste diversion opportunities and identify source reduction opportunities.

Solid waste is the unwanted or useless solid material generated from the human activities in residential, industrial or commercial area. Solid waste management reduce or eliminates the adverse impact on the environment and human health. Solid waste audit for SETI was carried out. The entire premise was analysed for solid waste generation and waste characterization. Overall waste was observed and characterization was done. The above table shows the components of solid waste at SETI campus. Quartering method was used and 1 Kg of waste was selected.

| Sr. No. | Type of waste | Composition % |
|---------|------------------|---------------|
| 1 | Plastic | 41 |
| 2 | Paper | 27 |
| 3 | Rubber | 2 |
| 4 | Food | 11 |
| 5 | Glass | 1 |
| 6 | Metals | 1 |
| 7 | Garden trimmings | 16 |
| 8 | Cloth and fibre | 1 |

Signature Not Verified SANJEEV Duffally Signed By NATVAR JAIN DATA NGINEERING & After analysing all the bins it was observed that plastic had highest contribution viz. 41% followed by the paper waste i.e. 27%. Mostly common observed plastic items were plastic wrappers of chips, soft drinks bottles and chocolate wrappers. The paper waste included paper wrappers, notebook pages, pamphlets and some pieces of cardboard. The third highest waste included garden trimmings. This waste was observed in the dustbins near velankar hall. It included small grass, minute branches etc. The least contribution was of cloth, fibre, glass and metals.

Institute follows good practices regarding separate bin system, and the bins are even marked. There are 2 separate bins present in campus viz. black bins for wet waste and green bins for dry waste. Considering applied science section they have places yellow bins for wet waste and green bins for dry waste.

Signature Not Verified

SANJEEV Dig NATVAR JAIN

5.6 Observations and Conclusion:

- There are separate bins for wet waste and dry waste. Hence, source segregation takes place.
- Institute has taken steps towards paper recycling. The paper waste collected from the bins is send to vendors.
- Plastic ban in campus is implemented but due to lack of seriousness in the students plastic is used in campus. Institute should conduct plastic awareness seminars for both the staff and students.

| Sr. No. | Test | Results |
|---------|----------|------------|
| 1 | рН | 6.3 |
| 2 | NPK | 2:4:1 |
| 3 | Acidity | 132 mg/lit |
| 4 | Hardness | 187 mg/lit |

Assessment of soil was done to determine the quality of soil:

5.7 Ambient Air Audit:

Ambient air quality refers to the condition or quality of air surrounding us and in the outdoors. National Ambient Air Quality Standards are the standards for ambient air quality set by the Central Pollution Control Board (CPCB) that is applicable nationwide. The CPCB has been conferred this power by the Air (Prevention and Control of Pollution) Act, 1981. Hence, auditing this ambient air quality is stated as ambient air audit.

SETI has carried out its ambient air audit at various locations in the premises. Air quality detector machine PS-21185 was used for air audit. Parameters viz. SOx, NOx, RSPM and Air quality were assessed. Following google earth pro images shows the assessed locations.

Signature Not Verified SANJEEV - Digtally Signed By SANJEEV ATVAR NATVAR JAIN CALL DESATURE VAN SANDERING &

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |
| 7 | Point No 7 | Classroom 3 |
| 8 | Point No 8 | Block 1 |
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of air quality monitoring:

| Point No | Location | SOx | NOx | RSPM | Quality |
|----------|--------------|-------|-------|-------|---------|
| | CPCR Limits | 80 | 80 | 80 | _ |
| | Cr CD Linnis | μg/m3 | μg/m3 | μg/m3 | - |
| 1 | Gate entry | 36 | 41 | 69 | Good |
| 2 | Passage | 8 | 10 | 41 | Fresh |
| 3 | Office | 9 | 8 | 33 | Good |
| 4 | Drawing hall | 8 | 11 | 22 | Fresh |
| 5 | Classroom 1 | 15 | 14 | 29 | Fresh |
| 6 | Classroom 2 | 5 | 9 | 29 | Fresh |
| 7 | Classroom 3 | 11 | 12 | 22 | Good |
| 8 | Block 1 | 8 | 8 | 21 | Good |
| 9 | Block 2 | 11 | 12 | 23 | Good |
| 10 | Block 3 | 14 | 11 | 18 | Good |
| 11 | Block 4 | 14 | 10 | 21 | Good |

| 12 | Open air | 22 | 21 | 44 | Good |
|----|------------|----|----|----|-------|
| 13 | Library | 11 | 8 | 21 | Fresh |
| 14 | Study room | 12 | 18 | 22 | Fresh |

Conclusion and recommendations:

- After assessing the air quality all the results are within the limits. Considering the RSPM i.e. respirable dust particulate matter highest was observed at the gate entrance. This is due to the present of small dust particles from the open ground. The second highest was observed in passages.
- Considering the SOx and NOx, it is mainly due to vehicle exhaust. Hence the highest was observed at the main gate entrance since many vehicles from public and college travel.
- There are some measures commonly need to follow such as Ban on open solid waste burning in campus and ban on grass burning in summer season.

5.8 Ambient Noise audit:

Ambient sound in relation to audio refers to the background noise present at a given scene or a location. This can include noises such as rain, traffic, crickets, birds, etc. Ambient sound levels are often measured in order to map sound conditions over a specific time to understand their variation with locale and various points. Ambient noise level is measured with a sound level meter. It is usually measured in Decibel (dB).

Signature Not Verified bighally Signed By SANJEEV NATVAR JAIN CARN DESAUEVAN ENGINEERING & Three points were selected based on best suitable requirement for noise monitoring. RS-2250 instrument was used. Monitoring was carried out 3 times in a day for 3 months. Readings were collected in morning section, afternoon section and evening section. In addition to this monitoring was also carried out in library section, study room section, classrooms, tutorial rooms and laboratories.

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |
| 7 | Point No 7 | Classroom 3 |
| 8 | Point No 8 | Block 1 |
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of noise assessment:

All the values are in decibels. Assessment values present average of 3 months data and the last column present the final average of morning noon and evening.

| Point No | Location | Morning | Noon | Evening | Average |
|----------|--------------|---------|-------|---------|---------|
| 1 | Gate entry | 66.48 | 81.55 | 61.22 | 69.75 |
| 2 | Passage | 55.18 | 64.28 | 51.27 | 56.91 |
| 3 | Office | 62.02 | 66.32 | 71.47 | 66.60 |
| 4 | Drawing hall | 41.27 | 45.68 | 40.22 | 42.39 |
| 5 | Classroom 1 | 32.59 | 38.49 | 32.22 | 34.43 |

| 6 | Classroom 2 | 35.69 | 41.22 | 33.28 | 36.73 |
|----|-------------|-------|-------|-------|-------|
| 7 | Classroom 3 | 35.55 | 36.45 | 35.42 | 35.81 |
| 8 | Block 1 | 41.22 | 48.59 | 41.59 | 43.80 |
| 9 | Block 2 | 40.68 | 44.58 | 42.22 | 42.49 |
| 10 | Block 3 | 41.25 | 41.00 | 39.54 | 40.59 |
| 11 | Block 4 | 42.89 | 44.25 | 38.28 | 41.80 |
| 12 | Open air | 55.26 | 51.26 | 50.22 | 52.24 |
| 13 | Library | 33.28 | 29.88 | 30.12 | 31.09 |
| 14 | Study room | 30.12 | 31.22 | 30.00 | 30.44 |

Conclusion and recommendations:

- As per the rules defined by CPCB the limit standards set for institutes regarding noise emissions are restricted to 50 Decibels.
- Considering the average data highest noise emission were observed at main gate entrance, passage, office and open air. This is due to more wide open spaces and echo of sound.
- The lowest emission was observed at the library and study room section. SETI has followed good practices regarding discipline in library section.
- Some common suggestions such as, installing sign boards in campus regarding provision of mobiles, setting up rules for students regarding premises and canteen utilization.

6. Energy Audit:

An energy audit is an inspection survey and an analysis of energy flows for energy conservation in a building. It may include a process or system to reduce the amount of energy input into the system without negatively affecting the output. In commercial and industrial real estate, an energy audit is the first step in identifying opportunities to reduce energy expense and carbon footprint.

A nation is tiring to advance in quantity and quality to the spread of education among the common India and development of their intelligence. In India the entire field of education and other fields of intelligent activities had been monopolized by a handful of men before independence. But today we are marching towards the desirable status of a developed nation with fast strides. But the development should be a sustained one. For achieving such an interminable development energy management is essential. As far as concerning electricity crisis, we are facing lack of electricity during office work. So, institutional management is taking design regarding production of electricity and saving electricity for Eco social aspect. Energy requirement of India is growing and incomplete domestic fossil fuel treasury. The country has motivated strategy to enlarge its renewable energy resources and policy to establish the nuclear power plants. India increases the involvement of nuclear power to largely electrical energy development facility from 4.2% to 9%. India's industrial demand accounted for 35% of electrical power requirement, domestic household use accounted for 28%, agriculture 21%, commercial 9%, and public lighting and other miscellaneous applications accounted for the rest. Energy conservation means reduction in energy consumption without making any sacrifice of quantity or quality. A successful energy management program begins with energy conservation; it will lead to adequate rating of equipment's, using high efficiency equipment and change of habits which causes enormous wastages of energy. By observing all these study lack of electricity and huge electricity demands. It is necessary to plan to be self-sufficient in electricity requirement.

6.1 Connection details:

Institute receives electricity from MSEB i.e. Maharashtra State Electricity Distribution Co. Ltd. Following are the details about connection.

- **Type of connection:** HT
- Tariff: 146 HT-VIII B

- Sanctioned load: 300.00 KW
- Contract demand: 240.00 KVA
- Feeder voltage: 11 KV

Tariff Structure:

As per Maharashtra State Electricity Distribution Company Limited, HT and LT consumers have an option to take Time of Day (TOD) tariff instead of the normal tariff. Under TOD tariff electricity consumption and maximum demand in respect of HT consumers for different periods of the day i.e. normal period, peak load period and off-peak load period could be recorded by installing TOD meter. The maximum demand and consumption recorded in different periods could be billed on the following rates of the tariff applicable.

| TOD Tariffs | Rate % (Rs./Unit) |
|---|-------------------|
| 0000 Hrs- 0600 Hrs & 2200 Hrs- 2400 Hrs | -1.500 |
| 0600 Hrs- 0900 Hrs & 1200 Hrs- 1800 Hrs | 0.000 |
| 0900 Hrs- 1200 Hrs | 0.800 |
| 1800 Hrs- 2200 Hrs | 1.100 |

Power Factor:

Power Factor (PF) is an indicator of efficient utilization of power. In an AC (Alternating Current) electrical power system, PF is defined as the ratio of real power flowing to the load, to the apparent power in the circuit and is a dimensionless number.

6.4 **ILER analysis:**

Lighting is provided in industries, commercial buildings, indoor and outdoor for providing comfortable working environment. The primary objective is to provide the required lighting effect for the lowest installed load i.e. highest lighting at lowest power consumption. The purpose of performance test is to calculate the installed efficacy in terms of lux/watt/m² (existing or design) for general lighting installation. The calculated value can be compared with the norms for specific types of interior installations for assessing improvement options.

| Range | Condition |
|-------------|--------------------------------|
| 0.5 or less | Urgent activity required (UAR) |
| 0.51 - 0.70 | Review Suggested (RS) |
| 0.70- above | Good |

ILER analysis for various sections in SETI were carried out. Firstly using LUX meter illumination was measured and then numerical analysis was carried out. ILER gives idea about lighting conditions and measured regarding improving them.

| Sr. No. | Section | LUX reading | ILER | Condition |
|---------|---------------|-------------|------|-----------|
| 1 | Library | 128 | 0.71 | Good |
| 2 | Study room | 151 | 0.71 | Good |
| 3 | Classroom S1 | 101 | 0.46 | UAR |
| 4 | Classrooms S2 | 122 | 0.58 | RS |
| 5 | Laboratories | 199 | 0.84 | Good |
| 6 | Office | 174 | 0.74 | Good |

Main Building analysis

Other section

| Sr. No. | Section | LUX reading | ILER | Condition |
|---------|---------------|-------------|------|-----------|
| 1 | Staff room | 128 | 0.56 | RS |
| 2 | Classrooms | 177 | 0.71 | Good |
| 3 | Laboratories | 166 | 0.78 | Good |
| 5 | Computer tabs | 123 | 0.52 | RS |

Reasons for Good ILER:

- Proper placement of windows and doors so that natural light is available well.
- Good ventilation system.

Use of LED bulds:

Institute has toatl light load connection of : 46500 watts

LED load connection is: 32300 watts

Light load other than LED: 14200 watts

Percentage of LED use in institute: 69.46%

Alternatice methods of energy:

Solar power plant at SETI

Capacity of plant: 70kw

Hybrid grid: (Solar + Wind): 50kw

Total capacity: 70+50 = 120 kw

Hybrid Generation during year 2021-2022

| Month | PF | Units generated |
|--------------|------|-----------------|
| April 21 | 0.94 | 28145 |

7. Observations and Conclusions:

This section gives the overviews of all the audits.

1. Water Section:

Institute has provision of rain water harvesting; hence huge amount of water is conserved and saved. Another good point is that the rain water collected at various section and is used to ground.

2. Wastewater Section:

SETI doesn't have any wastewater treatment facility till now as all the waste is directly sent to sewers. But the institute has planned for CWs i.e. constructed wetland systems for both the grey and black water treatment. Institute has also planned for hazardous waste management. The waste water generated through chemistry lab will also be treated and then led of onto sewers.

3. Solid waste management:

Proper method such as separate bins for wet waste and dry waste which leads to source segregation is followed by SETI.

4. E-waste:

Electronic waste is generated from many sections viz. physics lab, computer lab and applied science section. Institute collets the E waste centrally and is send to vendors for proper disposal means.

5. Sustainable water practices:

Institute has a fresh source of water i.e. river water. Water is recycled and used.

6. Energy:

Institute has followed good means by installing sustainable source of energy viz. solar energy and wind power generation. They have taken good measures by installing LED lights and solar sensor lights in the campus which are proving to be energy efficient.

AUDIT REPORT 2020-21

ENVIRONMENTAL & CIVIL ENGINEERING SOLUTIONS ISO 9001: 2015, IEC 17025: 2017

Editorial

In the Era of global warming and climate change every citizen has to reduce their own carbon foot prints to tackle with the adverse impacts of climate change. A green audit of any academic institution revels ways in which we can reduce energy consumption, water use and reduction in emission of carbon dioxide in the environment. It is a process to look into and ask ourselves whether we are also contributing to the degradation of the environment and if so, in what manner and how we can minimize this contribution and bring down to zero and preserve our environment for future generation.

Sanjeevan Engineering & Technology Institute administration has already taken a step towards the green approach and conducted green audit of campus in the year 2021. As an outcome of this institute has taken green steps to reduce its carbon foot prints by several means in campus viz. sustainable fittings, tree plantation and green computing in the administration and examination. The responsibility of carrying out the scientific green audit was given to Environmental and Civil Engineering Solutions. The organization has followed the rules and regulation of Ministry of Environment and Forest, Govt. of India and Central Pollution Control Board, New Delhi.

A questionnaire was prepared based on the guidelines and format of CPCB, New Delhi to conduct green audit. The information related to consumption of resources like water, electricity and handling of solid and hazardous waste was collected in the formats from main building support services and departments. The data collected was grouped and was tabulated in Excel sheets and analysed. The graphs of the analysed data were prepared for getting quick idea of the status. Interpretation of the overall outcomes was made which incorporates primary and secondary data, references and interrelations within. Final report preparation was carried out using this interpretation to prepare environment management plan of institute for next two years.

During the preparation of the Audit Report Hon. Principal, Hon. Vice Principal encouraged us with their full support. Registrar, Director, IQAC, Deans of faculties, and other officers of the institute were also given support to carry out this work. All Heads of the department, Directors, Co-ordinators, In-charge of the support services and engineering section of the university also gave full co-operation.

I hope the efforts made will be helpful for university to take one green step ahead.

Nikhil N. Kamble (C.E.O and Head)

1. Introduction

The modernization and industrialization are the two important outputs of twentieth century which have made human life more luxurious and comfortable. Simultaneously, they are responsible for voracious use of natural resources, exploitation of forests and wildlife, producing massive solid waste, polluting the scarce and sacred water resources and finally making our mother Earth ugly and inhospitable. Today, people are getting more familiar to the global issues like global warming, greenhouse effect, ozone depletion and climate change etc. Now, it is considered as a final call by mother Earth to walk on the path of sustainable development. The time has come to wake up, unite and combat together for sustainable environment.

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

1.1 Need of audit:

Green auditing is the process of identifying and determining whether institutions practices are eco-friendly and sustainable. Traditionally, we are good and efficient users of natural resources. But over the period of time excess use of resources like energy, water, chemicals are become habitual for everyone especially, in common areas. Now, it is necessary to check whether our processes are consuming more than required resources? Whether we are handling waste carefully? Green audit regulates all such practices and gives an efficient way of natural resource utilization. In the era of climate change and resource depletion it is necessary to verify the processes and convert it in to green and clean one. Green audit provides an approach for it. It also increases overall consciousness among the people working in institution towards an environment.

1.2 Goals of audit:

Institute has conducted an audit with specific goals as:

- 1. Identification and documentation of green practices followed by university.
- 2. Identify strength and weakness in green practices.
- 3. Conduct a survey to know the ground reality about green practices.
- 4. Analyse and suggest solution for problems identified from survey.
- 5. Assess facility of different types of waste management.
- 6. Increase environmental awareness throughout campus.
- 7. The long term goal of the environmental audit program is to collect baseline data of environmental parameters and resolve environmental issue before they become problem.

1.3 Objectives of Audit:

- 1. To examine the current practices which can impact on environment such as of resource utilization, waste management etc.
- 2. To identify and analyse significant environmental issues.
- 3. Setup goal, vision and mission for Green practices in campus.
- 4. Establish and implement Environmental Management in various departments.
- 5. Continuous assessment for betterment in performance in green practices and its evaluation.

1.4 NAAC criteria VII Environmental Consciousness:

Institutes are playing a key role in development of human resources worldwide. Higher education institutes campus run various activities with aim to percolate the knowledge along with practical dimension among the society. Likewise different technological problems higher education institutes also try to give solution for issues related to environment. Different types of evolutionary methods are used to assess the problem concerning environment. It includes Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), Carbon Footprint Mapping, Green audit etc

National Assessment and Accreditation Council (NAAC) which is a self-governing organization that declares the institutions as Grade according to the scores assigned at the time of accreditation of the institution. Green Audit has become mandatory procedure for educational institutes under Criterion VII of NAAC. The intention of green audit is to

7

upgrade the environmental condition inside and around the institution. It is performed by considering environmental parameters like water and wastewater accounting, energy conservation, waste management, air, noise monitoring etc. for making the institution more eco-friendly.

1.5 Benefits of Green Audit to an Educational Institute:

There are many advantages of green audit to an Educational Institute:

- 1. It would help to protect the environment in and around the campus.
- 2. Recognize the cost saving methods through waste minimization and energy conservation.
- 3. Find out the prevailing and forthcoming complications
- 4. Empower the organization to frame a better environmental performance.
- 5. It portrays good image of institution through its clean and green campus.

2. Overview of Institute

The Sanjeevan Engineering & Technology Institute, Panhala was established in the year of 1994. Institute has huge area of 13 acres and has been serving the mankind in the field science and technology.

The landscaped grounds of college are widely admired for their beauty. The most valuable investment any educational institution can make is "Nurturing Future Leaders". With the continuous rise in expectation of essential leadership standards, the institute has torch bearers have taken a responsibility for this investment to nurture the NextGen leaders with a vision to bridge the existing skill gap. With a firm step forward to attain an academic excellence, several Centres of Excellence, computer labs, and industry-academia associations have been setup at the College in association with the top leaders. The College believes that its primary stakeholders are the students. All aspects of education focus on the core values of contributing to national development while fostering global competencies among students. The College admits students from all social milieus and empowers them through intensive mentoring and counselling to face the challenges of life and become responsible and sensitized citizens of the country.

3. Methodology

3.1 Audits to be carried out:

- Green and carbon footprint audit
- Energy audit
- Environmental audit
 - Water audit
 - Wastewater audit
 - o Solid waste audit
 - o Ambient noise audit
 - o Ambient air audit

4. Green and Carbon footprint audit

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

Carbon is the basis of life on mother Earth. It is incorporated into the plants through photosynthesis, consumed by animal species through the food, presents in the form of carbon dioxide (CO_2) the atmosphere, locked into the rocks as limestone and compressed into the different fossil fuels such as coal and oil. As CO_2 level in the atmosphere continue to increase, most climate designs or project that the oceans of the world and trees will keep soaking up more than half CO_2 . The plants on land and in the sea, taken up carbon by over many years increased the percentage discharged during decay, and this increased carbon became locked away as fossil fuels beneath the surface of the planet. The starting of the 21st century brought growing concern about global warming, climate change, food security, poverty and population growth.

4.1 Green Cover at SETI:

SETI has got a huge green cover and has almost 50 species of vegetation inside the campus. The institute has 22 acres of campus and most of this is covered by green area. They have a huge plantations and structural components are Main building, office section, mess, Block A, Block B, Block C and Block D etc.

Figure 4-1 SETI, Campus

SETI has taken huge efforts to develop its green cover. The institute has about 8.59 acres of green cover. In the vicinity of the institute there are about approximately 710 fully grown trees and more than a 1300 growing plants. The above table shows some of the common tree species found. Institute has agriculture cover approximately about 4.86 acres in plantation.

| Sr. No. | Species |
|---------|-------------------------|
| 1 | Caesalpinia pulcherrima |
| 2 | Tribulus terrestris |
| 3 | Vachellia nilotica |
| 4 | Rotheca serrata |
| 5 | Lavandula bipinnata |
| 6 | Barleria cristata |
| 7 | Fox Brush Orchid |

Mostly there are trees of Tamarind, mango, neem, ferns etc. Due to this the institute has high carbon sequesterial values. Considering the vicinity some dry plants were observed to approximately about 38. Plants absorb sunlight, 50% is absorbed and 30% reflected so this helps to create a cooler and more pleasant climate through a 3°C temperature reduction in the vicinity. This has also leaded to increase in biodiversity as more than 18 species of birds were observed. Some off the common birds were viz. Sparrow, wild parrots, little stint, black kite etc.

4.2 Carbon Footprint Audit:

SETI has estimated its carbon footprint by factor methodology. Various factors were used to estimate the carbon emissions from Consumption of electricity, generation of solid waste, use of vehicles in campus, carbon emissions due to human breathing and emissions from buildings. At last they have also calculated Carbon sequesterial value i.e. carbon that is absorbed by the plants.

| Sr. No. | Month | Units | CO ₂ emitted (KgCO ₂ eq.) |
|---------|---------|--------|--|
| 1 | Mar 20 | 14,007 | 11485.74 |
| 2 | Apr- 20 | 35,758 | 29321.56 |
| 2 | May 20 | 14,170 | 11619.4 |
| 3 | Jun 20 | 15,780 | 12939.6 |
| 4 | Jul 20 | 16,706 | 13698.92 |
| 5 | Aug 20 | 14,574 | 11950.68 |
| 6 | Sep 20 | 14,619 | 11987.58 |
| 7 | Oct 20 | 17,250 | 14145 |
| 8 | Nov 20 | 39,102 | 32063.64 |
| 9 | Dec 20 | 47,923 | 39296.86 |
| 10 | Jan 21 | 44,486 | 36478.52 |
| 11 | Feb 21 | 51,872 | 42535.04 |
| 12 | Mar 21 | 14,007 | 11485.74 |

Hence as per the calculation the average unit consumption considering all the months is about 27,187 units and the carbon emission is 22293 kg CO_2 eq./year.

Secondly considering emissions from human breathing, the institute has total 1213 students. Institute has special boys and girls hostel. Considering all the staff viz. Junior teachers, senior teachers, Non grant, grant CHB they are total of 77. The staff works for about averagely 6 hours a day in the institute and the students are present for 4 hours averagely daily.

Vehicles emit significant amount of gases in environment and SETI has various parking sections in the campus. It was found that averagely 142 vehicles entered the institute daily and travel about 200 m of distance from the gate. Cars also enter the institute and as per observation 12 cars are observed daily. Hence, emission from 2 wheelers is 755.44 g/km CO_2 eq. considering petrol and diesel cars the emission are 474.6 g/km CO_2 eq. Overall the institute emits 286.44 Kg CO_2 eq. per year.

Solid waste is very important as it emits significant amount of carbon through it. SETI has a

good solid waste management system. Hence the institute develops about 1128 kg of waste daily in both the form of wet and dry. Hence for non-residing persons the emissions are 975.38 kg CO_2 eq. per day.

Buildings play an important role in carbon contribution. During the construction operation and use phase they emit significant amount of carbon. Hence considering total built-up area the carbon emissions could be evaluated. After the estimation the total built-up area observed was approximately about 5061 sq. m and the carbon emission were 1012.20 kg CO_2 eq. per year.

Carbon sequesterial in important as it is the carbon absorbed by the trees. SETI campus has 710 fully grown trees and 1300 growing trees. Hence the carbon absorbed by both this trees is 23108 kg CO_2 eq. per year.

| Sr. No. | Section | Emission |
|---------|-------------------------------|---|
| 1 | Emission from electricity | 22293 kg CO_2 eq./year. |
| 2 | Emission from solid waste | 9.75 ton CO_2 eq. per year. |
| 3 | Emission from Vehicles | 1230 Kg CO ₂ eq. per year. |
| 4 | Emission from human breathing | 72.03 tons of CO_2 eq. per year. |
| 5 | Emission from buildings | $1012.20 \text{ kg CO}_2 \text{ eq. per year.}$ |
| 6 | Carbon sequesterial | 23108 kg CO_2 eq. per year. |

Hence overall carbon data for SETI is mentioned below.

4.3 Conclusion:

- Highest carbon emission was observed from human breathing i.e. 72.03 tons of CO₂ eq. per. Year. There is no any significant mean to reduce this number as it is not controllable.
- The next is solid waste. The emission from solid waste comprises of 9.75 ton CO_2 eq. per year. This can be significantly reduced by following simple means. Waste segregation is properly observed by the institute and they should follow the cut out plastic plans. There should be complete ban in using the plastic inside the campus. There should be minimization of food waste as it contributes highest in carbon emissions.
- Considering emission from electricity they can be significantly reduced by decrease in electricity use. This can be done by installing LED lights and using energy efficient

equipment's such as machines with high star ratings which save more. Institute can recognize renewable energy sources and have a setup in the institute. This can lead in significant saving of electricity and reduction in carbon emissions.

- Vehicles have the least emissions in SETI and it is due to the easy approached parking so that vehicles do not roam in the vicinity. All the vehicles travel hardly 350 m in the campus and tis has lead to lower emissions. Still institute can follows "NO Vehicle Day" on every 2nd Saturday of each month.
- Institute reduces about 2.1 tons of CO₂ per year by the means of plants. This could be increased by increasing in plantations. SETI can plant more trees next to chemistry section, surrounding to play ground, front of applied science department etc.
- The plants having highest Carbon sequestration values are suggested. Cinnamomum verum, Eugenia caryophyllid, Bumelia celestina, Acacia Berland Eri, Acacia Francescana, Chinaberry tree, Moringa oleífer, Carya illusoriness, Pinus Arizonian and Buddleia cordata are some of the suggested species for plantation.

5. Environmental Audit

An environmental audit is a type of evaluation intended to identify environmental compliance and management system implementation gaps, along with related corrective actions. ISO 14001 is a voluntary international standard for environmental management systems ("EMS"). ISO 14001:2004 provides the requirements for an EMS and ISO 14004 gives general EMS guidelines. An EMS meeting the requirements of ISO 14001:2004 is a management tool enabling an organization of any size or type to:

- Identify and control the environmental impact of its activities, products or services;
- Improve its environmental performance continually, and
- Implement a systematic approach to setting environmental objectives and targets, to achieving these and to demonstrating that they have been achieved.

The audit examines the potential hazards or risks posed by the institutes. Areas examined may include environmental policies and procedures, energy use practices, recycling, waste, conservation, and pollution. Then, the institute can use the results to determine what changes need to be made for compliance. In a broad sense, environmental auditing aims to help protect the environment and minimize the risks of business activities to the environment and human safety and health.

5.1 Water Audit and wastewater audit:

Water auditing is a method of quantifying water flows and quality in systems, with a view to reducing water usage and often saving money on otherwise unnecessary water use. Water audit is an effective management tool for minimizing losses, optimizing various uses and thus enabling considerable conservation of water. Water audits trace water use from its point of entry into the facility/system to its discharge into the sewer/river/canal etc. Wastewater audit deals with effective management of wastewater in the system. It deals with proper generation, management, treatment, transfer and disposal of wastewater.

SETI has carried out its water and wastewater audit and has suggested many more ways for water conservation, reuse and recycle. The detail water and waste water report is mentioned below.

5.2 Water Audit report:

Water audit for the "SETI" was carried out. The purpose of the water audit is to provide a thorough understanding of the water uses by identifying and measuring all water using fixtures, appliances, and practices in order to recommend potential water saving efficiencies.

PRIMARY DATA

| Sr. No. | Title | Information |
|---------|--|---|
| 1 | Name of Institute | SETI |
| 2 | Address | Panhala |
| 4 | Name of company under which water audit is carried out | Environmental and Civil Engineering Solutions, Sangli |

| Gents toilet | 935 users | 935 X 10 lit = 9350 |
| Washbasin | 1213 users | 1213 X 0.75 lit = 909.75 |
| Ladies toilet | 278 users | 278 X 12 lit = 3348 |
| Toilet cleaning | 500 liters | 500 liters |
| Floor cleaning | 500 liters | 500 liters |
| Gardening | 1300 liters | 1300 liters |
| Laboratories | 1200 liters | 1200 liters |
| Total | | 17,107 lit |

WATER CONSUMPTION IN HOSTEL

Considering 135 LPCD there are 71 boys and girls in hostel section. Hence, 135 X 71 is 9585 liters.

WATER USED FOR DRINKING

There are coolers cum water purifiers present in the institute. Sample assessment for 3 months was done and average values are presented below for each section.

Potable water assessment:

Section 1

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | pН | 6.0-7.2 | 6.5-8.5 |
| 2 | TDS | 145 | - |
| 3 | E.C | 77 | - |
| 4 | Hardness | 121 | 200 |
| 5 | Chlorides | 102 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

Section 2

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 7.0-7.7 | 6.5-8.5 |
| 2 | TDS | 112 | - |
| 3 | E.C | 198 | - |
| 4 | Hardness | 124 | 200 |
| 5 | Chlorides | 109 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

Section 3

| Sr. No. | Test | Results | Limit |
|---------|----------|---------|---------|
| 1 | рН | 7.5-7.6 | 6.5-8.5 |
| 2 | TDS | 144 | - |
| 3 | E.C | 104 | - |
| 4 | Hardness | 105 | 200 |

| 5 | Chlorides | 111 | 200 |
|---|----------------|-----|-----|
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

Section 4

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 6.8-7.7 | 6.5-8.5 |
| 2 | TDS | 144 | - |
| 3 | E.C | 125 | - |
| 4 | Hardness | 112 | 200 |
| 5 | Chlorides | 133 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

Municipal water and deep well water assessment:

River water ESR water assessment

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 8.1 | 6.5-8.5 |
| 2 | TDS | 1222 | - |
| 3 | E.C | 2312 | - |
| 4 | Hardness | 144 | 200 |
| 5 | Chlorides | 122 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

Main RO plant assessment

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 6.6 | 6.5-8.5 |
| 2 | TDS | 98 | - |
| 3 | E.C | 102 | - |
| 4 | Hardness | 33 | 200 |
| 5 | Chlorides | 77 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Clear | - |

5.3 Waste water audit:

SETI campus generates huge amount of wastewater. The source for wastewater in the campus is hostels, institute, mess and the washrooms and urinals inside the campus. To estimate the amount of wastewater generated all the water that is used in the washrooms, quarters and hostels is considered as wastewater.

| Sr. No. | Section | Wastewater generated in litres |
|---------|--------------------------------|-----------------------------------|
| 1 | Wastewater generated in campus | 17107 |
| 2 | Hostel boys | 3213 |
| 3 | Hostel girls | 3497 |
| | Total | 23816 |

5.4 Waste water treatment plant at SETI:

Currently SETI lets all it waste water into sewers and some of the waste water is disposed at the back of chemistry department. Currently there is no any waste treatment facility. Sampling of waste water was done for 3 months for the parameters of COD, BOD, TKN and pH. Following table shows the characterization of wastewater.

| Sr. No. | Parameter | Reading |
|---------|-----------|---------|
| 1 | pН | 7.41 |
| 2 | COD | 198 |
| 3 | BOD | 99 |
| 4 | TKN | 17 |

5.5 Solid waste Audit:

A waste audit is a physical analysis of waste composition to provide a detailed understanding of problems, identify potential opportunities, and give you a detailed analysis of your waste composition. A waste audit will help you clearly identify your waste generation to establish baseline or benchmark data, Characterize and quantify waste stream, Verify waste pathways, identify waste diversion opportunities and identify source reduction opportunities.

Solid waste is the unwanted or useless solid material generated from the human activities in residential, industrial or commercial area. Solid waste management reduce or eliminates the adverse impact on the environment and human health. Solid waste audit for SETI was carried out. The entire premise was analysed for solid waste generation and waste characterization. Overall waste was observed and characterization was done. The above table shows the components of solid waste at SETI campus. Quartering method was used and 1 Kg of waste was selected.

| Sr. No. | Type of waste | Composition % |
|---------|------------------|---------------|
| 1 | Plastic | 41 |
| 2 | Paper | 27 |
| 3 | Rubber | 2 |
| 4 | Food | 11 |
| 5 | Glass | 0.5 |
| 6 | Metals | 2 |
| 7 | Garden trimmings | 16 |
| 8 | Cloth and fibre | 0.5 |

After analysing all the bins it was observed that plastic had highest contribution viz. 41% followed by the paper waste i.e. 27%. Mostly common observed plastic items were plastic wrappers of chips, soft drinks bottles and chocolate wrappers. The paper waste included paper wrappers, notebook pages, pamphlets and some pieces of cardboard. The third highest waste included garden trimmings. This waste was observed in the dustbins near velankar hall. It included small grass, minute branches etc. The least contribution was of cloth, fibre, glass and metals.

Institute follows good practices regarding separate bin system, and the bins are even marked. There are 2 separate bins present in campus viz. black bins for wet waste and green bins for dry waste. Considering applied science section they have places yellow bins for wet waste and green bins for dry waste.

5.6 Observations and Conclusion:

- There are separate bins for wet waste and dry waste. Hence, source segregation takes place.
- Institute has taken steps towards paper recycling. The paper waste collected from the bins is send to vendors.
- Plastic ban in campus is implemented but due to lack of seriousness in the students plastic is used in campus. Institute should conduct plastic awareness seminars for both the staff and students.

| Sr. No. | Test | Results |
|---------|----------|------------|
| 1 | рН | 6.3 |
| 2 | NPK | 2:4:1 |
| 3 | Acidity | 128 mg/lit |
| 4 | Hardness | 177 mg/lit |

Assessment of soil was done to determine the quality of soil:

5.7 Ambient Air Audit:

Ambient air quality refers to the condition or quality of air surrounding us and in the outdoors. National Ambient Air Quality Standards are the standards for ambient air quality set by the Central Pollution Control Board (CPCB) that is applicable nationwide. The CPCB has been conferred this power by the Air (Prevention and Control of Pollution) Act, 1981. Hence, auditing this ambient air quality is stated as ambient air audit.

SETI has carried out its ambient air audit at various locations in the premises. Air quality detector machine PS-21185 was used for air audit. Parameters viz. SOx, NOx, RSPM and Air quality were assessed. Following google earth pro images shows the assessed locations.

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |
| 7 | Point No 7 | Classroom 3 |
| 8 | Point No 8 | Block 1 |
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of air quality monitoring:

| Point No | Location | SOx | NOx | RSPM | Quality |
|----------|--------------------|-------|-------|-------|---------|
| | CPCB Limits | 80 | 80 | 80 | _ |
| | | μg/m3 | μg/m3 | μg/m3 | - |
| 1 | Gate entry | 31 | 37 | 77 | Good |
| 2 | Passage | 12 | 11 | 55 | Fresh |
| 3 | Office | 11 | 12 | 42 | Good |
| 4 | Drawing hall | 12 | 10 | 21 | Fresh |
| 5 | Classroom 1 | 11 | 11 | 44 | Fresh |
| 6 | Classroom 2 | 12 | 7 | 33 | Fresh |
| 7 | Classroom 3 | 15 | 18 | 34 | Good |
| 8 | Block 1 | 14 | 15 | 33 | Good |
| 9 | Block 2 | 14 | 15 | 23 | Good |
| 10 | Block 3 | 19 | 12 | 35 | Good |
| 11 | Block 4 | 14 | 10 | 21 | Fresh |
| 12 | Open air | 18 | 16 | 37 | Good |

| 13 | Library | 10 | 8 | 21 | Fresh |
|----|------------|----|---|----|-------|
| 14 | Study room | 11 | 9 | 22 | Fresh |

Conclusion and recommendations:

- After assessing the air quality all the results are within the limits. Considering the RSPM i.e. respirable dust particulate matter highest was observed at the gate entrance. This is due to the present of small dust particles from the open ground. The second highest was observed in passages.
- Considering the SOx and NOx, it is mainly due to vehicle exhaust. Hence the highest was observed at the main gate entrance since many vehicles from public and college travel.
- There are some measures commonly need to follow such as Ban on open solid waste burning in campus and ban on grass burning in summer season.

5.8 Ambient Noise audit:

Ambient sound in relation to audio refers to the background noise present at a given scene or a location. This can include noises such as rain, traffic, crickets, birds, etc. Ambient sound levels are often measured in order to map sound conditions over a specific time to understand their variation with locale and various points. Ambient noise level is measured with a sound level meter. It is usually measured in Decibel (dB).

Three points were selected based on best suitable requirement for noise monitoring. RS-2250

instrument was used. Monitoring was carried out 3 times in a day for 3 months. Readings were collected in morning section, afternoon section and evening section. In addition to this monitoring was also carried out in library section, study room section, classrooms, tutorial rooms and laboratories.

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |
| 7 | Point No 7 | Classroom 3 |
| 8 | Point No 8 | Block 1 |
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of noise assessment:

All the values are in decibels. Assessment values present average of 3 months data and the last column present the final average of morning noon and evening.

| Point No | Location | Morning | Noon | Evening | Average |
|----------|--------------|---------|-------|---------|---------|
| 1 | Gate entry | 64.59 | 79.58 | 59.82 | 68.00 |
| 2 | Passage | 53.29 | 66.45 | 49.87 | 56.54 |
| 3 | Office | 60.13 | 65.55 | 70.07 | 65.25 |
| 4 | Drawing hall | 44.53 | 40.11 | 42.86 | 42.50 |
| 5 | Classroom 1 | 39.58 | 33.28 | 33.23 | 35.36 |
| 6 | Classroom 2 | 36.55 | 44.56 | 31.79 | 37.63 |
| 7 | Classroom 3 | 33.66 | 45.22 | 45.89 | 41.59 |

| 8 | Block 1 | 42.32 | 55.58 | 42.59 | 46.83 |
|----|------------|-------|-------|-------|-------|
| 9 | Block 2 | 41.78 | 48.59 | 44.29 | 44.89 |
| 10 | Block 3 | 42.35 | 44.25 | 41.08 | 42.56 |
| 11 | Block 4 | 42.63 | 45.28 | 33.56 | 40.49 |
| 12 | Open air | 55.00 | 56.89 | 49.58 | 53.82 |
| 13 | Library | 33.02 | 31.28 | 31.25 | 31.85 |
| 14 | Study room | 64.59 | 79.58 | 59.82 | 68.00 |

Conclusion and recommendations:

- As per the rules defined by CPCB the limit standards set for institutes regarding noise emissions are restricted to 50 Decibels.
- Considering the average data highest noise emission were observed at main gate entrance, passage, office and open air. This is due to more wide open spaces and echo of sound.
- The lowest emission was observed at the library and study room section. SETI has followed good practices regarding discipline in library section.
- Some common suggestions such as, installing sign boards in campus regarding provision of mobiles, setting up rules for students regarding premises and canteen utilization.

6. Energy Audit

An energy audit is an inspection survey and an analysis of energy flows for energy conservation in a building. It may include a process or system to reduce the amount of energy input into the system without negatively affecting the output. In commercial and industrial real estate, an energy audit is the first step in identifying opportunities to reduce energy expense and carbon footprint.

A nation is tiring to advance in quantity and quality to the spread of education among the common India and development of their intelligence. In India the entire field of education and other fields of intelligent activities had been monopolized by a handful of men before independence. But today we are marching towards the desirable status of a developed nation with fast strides. But the development should be a sustained one. For achieving such an interminable development energy management is essential. As far as concerning electricity crisis, we are facing lack of electricity during office work. So, institutional management is taking design regarding production of electricity and saving electricity for Eco social aspect. Energy requirement of India is growing and incomplete domestic fossil fuel treasury. The country has motivated strategy to enlarge its renewable energy resources and policy to establish the nuclear power plants. India increases the involvement of nuclear power to largely electrical energy development facility from 4.2% to 9%. India's industrial demand accounted for 35% of electrical power requirement, domestic household use accounted for 28%, agriculture 21%, commercial 9%, and public lighting and other miscellaneous applications accounted for the rest. Energy conservation means reduction in energy consumption without making any sacrifice of quantity or quality. A successful energy management program begins with energy conservation; it will lead to adequate rating of equipment's, using high efficiency equipment and change of habits which causes enormous wastages of energy. By observing all these study lack of electricity and huge electricity demands. It is necessary to plan to be self-sufficient in electricity requirement.

6.1 Connection details:

Institute receives electricity from MSEB i.e. Maharashtra State Electricity Distribution Co. Ltd. Following are the details about connection.

- **Type of connection:** HT
- Tariff: 146 HT-VIII B

- Sanctioned load: 300.00 KW
- Contract demand: 240.00 KVA
- Feeder voltage: 11 KV

Tariff Structure:

As per Maharashtra State Electricity Distribution Company Limited, HT and LT consumers have an option to take Time of Day (TOD) tariff instead of the normal tariff. Under TOD tariff electricity consumption and maximum demand in respect of HT consumers for different periods of the day i.e. normal period, peak load period and off-peak load period could be recorded by installing TOD meter. The maximum demand and consumption recorded in different periods could be billed on the following rates of the tariff applicable.

| TOD Tariffs | Rate % (Rs./Unit) |
|---|-------------------|
| 0000 Hrs- 0600 Hrs & 2200 Hrs- 2400 Hrs | -1.500 |
| 0600 Hrs- 0900 Hrs & 1200 Hrs- 1800 Hrs | 0.000 |
| 0900 Hrs- 1200 Hrs | 0.800 |
| 1800 Hrs- 2200 Hrs | 1.100 |

Power Factor:

Power Factor (PF) is an indicator of efficient utilization of power. In an AC (Alternating Current) electrical power system, PF is defined as the ratio of real power flowing to the load, to the apparent power in the circuit and is a dimensionless number.

6.2 Bill analysis:

Bill analysis for SETI had been done for academic year 2020-2021.

Electricity consumption on the academic year 2020-2021

| Sr. No. | Month | Consumption (Kw) | Bill Amount |
|---------|--------------|-------------------------|-------------|
| 1 | April 20 | 14,007 | 2,74,190 |
| 2 | May 20 | 35,758 | 2,77,819 |
| 3 | June 20 | 14,170 | 2,12,344 |
| 4 | July 20 | 15,780 | 2,38,461 |
| 5 | August 20 | 16,706 | 2,49,469 |
| 6 | September 20 | 14,574 | 2,27,152 |
| 7 | October 20 | 14,619 | 2,25,770 |
| 8 | November 20 | 17,250 | 2,45,645 |
| 9 | December 20 | 39,102 | 4,45,944 |
| 10 | January 21 | 47,923 | 5,34,916 |
| 11 | February 21 | 44,486 | 4,73,952 |
| 12 | March 21 | 51,872 | 5,57,026 |

Highest consumption was observed in March 21 i.e. 51,872 units.

6.3 Equipment Details:

| Sr. No. | Name of Laboratory | Name of Equipment | Details |
|---------|----------------------|-------------------------------|-------------------|
| 1 | Concrete technology | Compression testing machine | Area: 92.73 sqm |

6.4 **ILER analysis:**

Lighting is provided in industries, commercial buildings, indoor and outdoor for providing comfortable working environment. The primary objective is to provide the required lighting effect for the lowest installed load i.e. highest lighting at lowest power consumption. The purpose of performance test is to calculate the installed efficacy in terms of lux/watt/m² (existing or design) for general lighting installation. The calculated value can be compared with the norms for specific types of interior installations for assessing improvement options.

| Range | Condition |
|-------------|--------------------------------|
| 0.5 or less | Urgent activity required (UAR) |
| 0.51 - 0.70 | Review Suggested (RS) |
| 0.70- above | Good |

ILER analysis for various sections in SETI were carried out. Firstly using LUX meter illumination was measured and then numerical analysis was carried out. ILER gives idea about lighting conditions and measured regarding improving them.

Main Building analysis

| Sr. No. | Section | LUX reading | ILER | Condition |
|---------|---------------|-------------|------|-----------|
| 1 | Library | 162 | 0.77 | Good |
| 2 | Study room | 155 | 0.71 | Good |
| 3 | Classroom S1 | 91 | 0.46 | UAR |
| 4 | Classrooms S2 | 134 | 0.60 | RS |
| 5 | Laboratories | 201 | 0.84 | Good |
| 6 | Office | 163 | 0.74 | Good |

Other section

| Sr. No. | Section | LUX reading | ILER | Condition |
|---------|---------------|-------------|------|-----------|
| 1 | Staff room | 149 | 0.50 | RS |
| 2 | Classrooms | 160 | 0.72 | Good |
| 3 | Laboratories | 159 | 0.71 | Good |
| 5 | Computer tabs | 149 | 0.55 | RS |

Reasons for Good ILER:

- Proper placement of windows and doors so that natural light is available well.
- Good ventilation system.

Use of LED bulds:

Institute has toatl light load connection of : 46500 watts

LED load connection is: 32300 watts

Light load other than LED: 14200 watts

Percentage of LED use in institute: 69.46%

Alternatice methods of energy:

Solar power plant at SETI

Capacity of plant: 70kw

Hybrid grid: (Solar + Wind): 50kw

Total capacity: 70+50 = 120 kw

Hybrid Generation during year 2021-2022

| Month | PF | Units generated |
|--------------|------|-----------------|
| April 20 | 0.93 | 12104 |
| May 20 | 0.95 | 35758 |
| June 20 | 0.94 | 14170 |
| July 20 | 0.93 | 15780 |
| August 20 | 0.93 | 16706 |
| September 20 | 0.93 | 14574 |
| October 20 | 0.95 | 14619 |
| November 20 | 0.87 | 17250 |
| December 20 | 0.98 | 39102 |
| January 21 | 0.98 | 47923 |
| February 21 | 0.98 | 44486 |
| March 21 | 0.99 | 51872 |

1 1

7. Observations and Conclusions

This section gives the overviews of all the audits.

1. Water Section:

Institute has provision of rain water harvesting; hence huge amount of water is conserved and saved. Another good point is that the rain water collected at various section and is used to ground.

2. Wastewater Section:

SETI doesn't have any wastewater treatment facility till now as all the waste is directly sent to sewers. But the institute has planned for CWs i.e. constructed wetland systems for both the grey and black water treatment. Institute has also planned for hazardous waste management. The waste water generated through chemistry lab will also be treated and then led of onto sewers.

3. Solid waste management:

Proper method such as separate bins for wet waste and dry waste which leads to source segregation is followed by SETI.

4. E-waste:

Electronic waste is generated from many sections viz. physics lab, computer lab and applied science section. Institute collets the E waste centrally and is send to vendors for proper disposal means.

5. Sustainable water practices:

Institute has a fresh source of water i.e. river water. Water is recycled and used.

6. Energy:

More number of solar panels can be installed for generation of green energy. Energy efficient equipment's can be used at various places too. Continues energy monitoring systems can be installed at places where high energy consumption takes place.

SANJEEVAN ENGINEERING & TECHNOLOGY INSTITUTE

AUDIT REPORT 2019-2020

Editorial

In the Era of global warming and climate change every citizen has to reduce their own carbon foot prints to tackle with the adverse impacts of climate change. A green audit of any academic institution revels ways in which we can reduce energy consumption, water use and reduction in emission of carbon dioxide in the environment. It is a process to look into and ask ourselves whether we are also contributing to the degradation of the environment and if so, in what manner and how we can minimize this contribution and bring down to zero and preserve our environment for future generation.

Sanjeevan Engineering & Technology Institute administration has already taken a step towards the green approach and conducted green audit of campus in the year 2019. As an outcome of this institute has taken green steps to reduce its carbon foot prints by several means in campus viz. sustainable fittings, tree plantation and green computing in the administration and examination. The responsibility of carrying out the scientific green audit was given to Environmental and Civil Engineering Solutions. The organization has followed the rules and regulation of Ministry of Environment and Forest, Govt. of India and Central Pollution Control Board, New Delhi.

A questionnaire was prepared based on the guidelines and format of CPCB, New Delhi to conduct green audit. The information related to consumption of resources like water, electricity and handling of solid and hazardous waste was collected in the formats from main building support services and departments. The data collected was grouped and was tabulated in Excel sheets and analysed. The graphs of the analysed data were prepared for getting quick idea of the status. Interpretation of the overall outcomes was made which incorporates primary and secondary data, references and interrelations within. Final report preparation was carried out using this interpretation to prepare environment management plan of institute for next two years.

During the preparation of the Audit Report Hon. Principal, Hon. Vice Principal encouraged us with their full support. Registrar, Director, IQAC, Deans of faculties, and other officers of the institute were also given support to carry out this work. All Heads of the department, Directors, Co-ordinators, In-charge of the support services and engineering section of the university also gave full co-operation.

I hope the efforts made will be helpful for university to take one green step ahead.

Nikhil N. Kamble (C.E.O and Head) Environmental and Civil Engineering Solutions

1. Introduction:

The modernization and industrialization are the two important outputs of twentieth century which have made human life more luxurious and comfortable. Simultaneously, they are responsible for voracious use of natural resources, exploitation of forests and wildlife, producing massive solid waste, polluting the scarce and sacred water resources and finally making our mother Earth ugly and inhospitable. Today, people are getting more familiar to the global issues like global warming, greenhouse effect, ozone depletion and climate change etc. Now, it is considered as a final call by mother Earth to walk on the path of sustainable development. The time has come to wake up, unite and combat together for sustainable environment.

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

1.1 Need of audit:

Green auditing is the process of identifying and determining whether institutions practices are eco-friendly and sustainable. Traditionally, we are good and efficient users of natural resources. But over the period of time excess use of resources like energy, water, chemicals are become habitual for everyone especially, in common areas. Now, it is necessary to check whether our processes are consuming more than required resources? Whether we are handling waste carefully? Green audit regulates all such practices and gives an efficient way of natural resource utilization. In the era of climate change and resource depletion it is necessary to verify the processes and convert it in to green and clean one. Green audit provides an approach for it. It also increases overall consciousness among the people working in institution towards an environment.

1.2 Goals of audit:

Institute has conducted a audit with specific goals as:

- 1. Identification and documentation of green practices followed by university.
- 2. Identify strength and weakness in green practices.
- 3. Conduct a survey to know the ground reality about green practices.
- 4. Analyse and suggest solution for problems identified from survey.
- 5. Assess facility of different types of waste management.
- 6. Increase environmental awareness throughout campus.
- 7. Identify and assess environmental risk.
- 8. Motivates staff for optimized sustainable use of available resources.
- 9. The long term goal of the environmental audit program is to collect baseline data of environmental parameters and resolve environmental issue before they become problem.

1.3 Objectives of Audit:

- 1. To examine the current practices which can impact on environment such as of resource utilization, waste management etc.
- 2. To identify and analyse significant environmental issues.
- 3. Setup goal, vision and mission for Green practices in campus.
- 4. Establish and implement Environmental Management in various departments.
- 5. Continuous assessment for betterment in performance in green practices and its evaluation.
- 6. To prepare an Environmental Statement Report on green practices followed by different departments, support services and administration building.

1.4 NAAC criteria VII Environmental Consciousness:

Institutes are playing a key role in development of human resources worldwide. Higher education institutes campus run various activities with aim to percolate the knowledge along with practical dimension among the society. Likewise different technological problems higher education institutes also try to give solution for issues related to environment. Different types of evolutionary methods are used to assess the problem concerning environment. It includes Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), Carbon Footprint Mapping, Green audit etc

National Assessment and Accreditation Council (NAAC) which is a self-governing organization that declares the institutions as Grade according to the scores assigned at the time of accreditation of the institution. Green Audit has become mandatory procedure for educational institutes under Criterion VII of NAAC. The intention of green audit is to upgrade the environmental condition inside and around the institution. It is performed by considering environmental parameters like water and wastewater accounting, energy conservation, waste management, air, noise monitoring etc. for making the institution more eco-friendly.

Students are the major strength of any academic institution. Practicing green actions in any educational institution will inculcate the good habit of caring natural resources in students. Many environmental activities like plantation and nurturing saplings and trees, Cleanliness drives, Bird watching camps, No vehicle day, Rain water harvesting, etc. will make the students good citizen of the country. Through Green Audit, higher educational institutions can ensure that they contribute towards the reduction of Global warming through Carbon Footprint reduction measures.

1.5 Benefits of Green Audit to an Educational Institute:

There are many advantages of green audit to an Educational Institute:

- 1. It would help to protect the environment in and around the campus.
- 2. Recognize the cost saving methods through waste minimization and energy conservation.
- 3. Find out the prevailing and forthcoming complications
- 4. Empower the organization to frame a better environmental performance.
- 5. It portrays good image of institution through its clean and green campus.

2. Overview of Institute:

The Sanjeevan Engineering & Technology Institute, Panhala was established in the year of 1994. Institute has huge area of 13 acres and has been serving the mankind in the field science and technology.

The landscaped grounds of college are widely admired for their beauty. The most valuable investment any educational institution can make is "Nurturing Future Leaders". With the continuous rise in expectation of essential leadership standards, the institute has torch bearers have taken a responsibility for this investment to nurture the NextGen leaders with a vision to bridge the existing skill gap. With a firm step forward to attain an academic excellence, several Centres of Excellence, computer labs, and industry-academia associations have been setup at the College in association with the top leaders. The College believes that its primary stakeholders are the students. All aspects of education focus on the core values of contributing to national development while fostering global competencies among students. The College admits students from all social milieus and empowers them through intensive mentoring and counselling to face the challenges of life and become responsible and sensitized citizens of the country.

3. Methodology:

3.1 Audits to be carried out:

- Green and carbon footprint audit
- Energy audit
- Environmental audit
 - o Water audit
 - \circ Wastewater audit
 - \circ Solid waste audit
 - o Ambient noise audit
 - Ambient air audit

4. Green and Carbon footprint audit:

Green Audit is the most efficient ecological tool to solve such environmental problems. It is a process of regular identification, quantification, documenting, reporting and monitoring of environmentally important components in a specified area. Through this process the regular environmental activities are monitored within and outside of the concerned sites which have direct and indirect impact on surroundings. Green audit can be one of the initiative for such institutes to account their energy, water resource use as well as wastewater, solid waste, E-waste, hazardous waste generation. Green Audit process can play an important role in promotion of environmental awareness and sensitization about resource use. It can create consciousness towards ecological values and ethics. Through green audit one can get direction about how to improve the condition of environment.

Carbon is the basis of life on mother Earth. It is incorporated into the plants through photosynthesis, consumed by animal species through the food, present in the form of carbon dioxide (CO2) the atmosphere, locked into the rocks as limestone and compressed into the different fossil fuels such as coal and oil. As CO2 level in the atmosphere continue to increase, most climate designs or project that the oceans of the world and trees will keep soaking up more than half CO2. The plants on land and in the sea, taken up carbon by over many years increased the percentage discharged during decay, and this increased carbon became locked away as fossil fuels beneath the surface of the planet. The starting of the 21st century brought growing concern about global warming, climate change, food security, poverty and population growth. In the 21st century more carbon has been released into the atmosphere than that has been absorbed. CO2 is a principle component causing global warming. Atmospheric carbon dioxide levels have increased to 40 % from preindustrial levels to more than 390 parts per million CO2. On this background it is a need of time to cover the research areas interrelated with climate change.

4.1 Green Cover at SETI:

SETI has got a huge green cover and has almost 55 species of vegetation inside the campus. The institute has 22 acres of campus and most of this is covered by green area. They have a huge plantations and structural components are Main building, office section, mess, Block A, Block B, Block C and Block D etc.

Figure 4-1 SETI, Campus

SETI has taken huge efforts to develop its green cover. The institute has about 7.96 acres of green cover. In the vicinity of the institute there are about approximately 822 fully grown trees and more than a 1120 growing plants. The above table shows some of the common tree species found. Institute has agriculture cover approximately about 4.55 acres in plantation.

| Sr. No. | Species |
|---------|-------------------------|
| 1 | Caesalpinia pulcherrima |
| 2 | Tribulus terrestris |
| 3 | Vachellia nilotica |
| 4 | Rotheca serrata |
| 5 | Lavandula bipinnata |

Mostly there are trees of Tamarind, mango, neem, ferns etc. Due to this the institute has high carbon sequesterial values. Considering the vicinity some dry plants were observed to approximately about 18. Plants absorb sunlight, 50% is absorbed and 30% reflected so this helps to create a cooler and more pleasant climate through a 3°C temperature reduction in the vicinity. This has also leaded to increase in biodiversity as more than 22 species of birds were observed. Some off the common birds were viz. Sparrow, wild parrots, little stint, black kite etc.

SETI | 19-20

4.2 Carbon Footprint Audit:

SETI has estimated its carbon footprint by factor methodology. Various factors were used to estimate the carbon emissions from Consumption of electricity, generation of solid waste, use of vehicles in campus, carbon emissions due to human breathing and emissions from buildings. At last they have also calculated Carbon sequesterial value i.e. carbon that is absorbed by the plants.

| Sr. No. | Month | Units | Demand | CO2 emitted (KgCO2 eq.) |
|---------|---------|-------|--------|----------------------------|
| 1 | Mar 19 | 50190 | 131 | 41155.80 |
| 2 | Apr- 19 | 40350 | 120 | 33087.00 |
| 2 | May 19 | 23238 | 120 | 19055.16 |
| 3 | Jun 19 | 33768 | 120 | 27689.76 |
| 4 | Jul 19 | 63534 | 164 | 52097.88 |
| 5 | Aug 19 | 25175 | 138 | 20643.50 |
| 6 | Sep 19 | 42722 | 138 | 35032.04 |
| 7 | Oct 19 | 54804 | 143 | 44939.28 |
| 8 | Nov 19 | 46067 | 135 | 37774.94 |
| 9 | Dec 19 | 59469 | 131 | 48764.58 |
| 10 | Jan 20 | 59087 | 133 | 48451.34 |
| 11 | Feb 20 | 56772 | 131 | 46553.04 |

Hence as per the calculation the average unit consumption considering all the months is about 46,264 units and the carbon emission is 37937.03 kg CO2 eq./year.

Secondly considering emissions from human breathing, due to COVID all the students and staff was operating from their home. Hence emissions from human breathing will not be in account.

Vehicles emit significant amount of gases in environment and SETI has various parking sections in the campus. Again due to COVID were rarely any vehicle was present in the campus.

Solid waste is very important as it emits significant amount of carbon. The institute was closed due to COVID pandemic and hence no any waste was generated.

Buildings play an important role in carbon contribution. During the construction operation and use phase they emit significant amount of carbon. Hence considering total built-up area the carbon emissions could be evaluated. After the estimation the total built-up area observed was approximately about 5061 sq. m and the carbon emission were 1012.20 kg CO2 eq. per year.

Carbon sequesterial in important as it is the carbon absorbed by the trees. SETI campus during COVID period had 830 fully grown trees and 1450 growing trees. Hence the carbon absorbed by both this trees is 26504 kg CO2 eq. per year.

Hence overall carbon data for SETI is mentioned below.

| Sr. No. | Section | Emission |
|---------|-------------------------|------------------------------|
| 1 | Emission from buildings | 1012.20 kg CO2 eq. per year. |
| 2 | Carbon sequesterial | 26504 kg CO2 eq. per year. |

4.3 Conclusion:

• The plants having highest Carbon sequestration values are suggested. Cinnamomum verum, Eugenia caryophyllid, Bumelia celestina, Acacia Berland Eri, Acacia Francescana, Chinaberry tree, Moringa oleífer, Carya illusoriness, Pinus Arizonian and Buddleia cordata are some of the suggested species for plantation.

5. Environmental Audit:

An environmental audit is a type of evaluation intended to identify environmental compliance and management system implementation gaps, along with related corrective actions. ISO 14001 is a voluntary international standard for environmental management systems ("EMS"). ISO 14001:2004 provides the requirements for an EMS and ISO 14004 gives general EMS guidelines. An EMS meeting the requirements of ISO 14001:2004 is a management tool enabling an organization of any size or type to:

- Identify and control the environmental impact of its activities, products or services;
- Improve its environmental performance continually, and
- Implement a systematic approach to setting environmental objectives and targets, to achieving these and to demonstrating that they have been achieved.

The audit examines the potential hazards or risks posed by the institutes. Areas examined may include environmental policies and procedures, energy use practices, recycling, waste, conservation, and pollution. Then, the institute can use the results to determine what changes need to be made for compliance. In a broad sense, environmental auditing aims to help protect the environment and minimize the risks of business activities to the environment and human safety and health.

5.1 Water Audit and wastewater audit:

Water auditing is a method of quantifying water flows and quality in systems, with a view to reducing water usage and often saving money on otherwise unnecessary water use. Water audit is an effective management tool for minimizing losses, optimizing various uses and thus enabling considerable conservation of water. Water audits trace water use from its point of entry into the facility/system to its discharge into the sewer/river/canal etc. Wastewater audit deals with effective management of wastewater in the system. It deals with proper generation, management, treatment, transfer and disposal of wastewater.

SETI has carried out its water and wastewater audit and has suggested many more ways for water conservation, reuse and recycle. The detail water and waste water report is mentioned below.

5.2 Water Audit report:

Water audit for the "SETI" was carried out. The purpose of the water audit is to provide a thorough understanding of the water uses by identifying and measuring all water using fixtures, appliances, and practices in order to recommend potential water saving efficiencies.

PRIMARY DATA

| Sr. No. | Title | Information |
|---------|--|---|
| 1 | Name of Institute | SETI |
| 2 | Address | Panhala |
| 4 | Name of company under which water audit is carried out | Environmental and Civil Engineering Solutions, Sangli |
| 6 | Number of floors | G + 2 |
| 7 | Category of building | Educational Institute |
| 8 | Nearest ESR location | Campus |
| 9 | Water supply hours | 6 hrs. daily |

SOURCE INFORMATION

| Title | Information |
|--------------------|---|
| Sources of water | River water pumping |
| Connection details | 1" PVC pipe inlet and 1" outlet distribution pipe |

STORAGE DETAILS

| Title | Information |
|--------------------|--|
| Overhead tank type | PVC tank |
| Location | On terrace |
| Number of tanks | Section A: 1 X 2000 lit PVC Section B: 4 X 2000 lit PVC Section C: 3 X 2000 lit PVC 2 X 1000 lit PVC Section D: 2 X 1000 lit PVC |

| Motor connection details | 2 Hp for pumping |
|------------------------------|------------------|
| Pumping period | 4 hours daily |
| Underground sump | No |
| Capacity of underground sump | NA |

Municipal water and deep well water assessment:

River water ESR water assessment

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 8.1 | 6.5-8.5 |
| 2 | TDS | 1295 | - |
| 3 | E.C | 2530 | - |
| 4 | Hardness | 213 | 200 |
| 5 | Chlorides | 140 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Ab | - |

| Sr. No. | Test | Results | Limit |
|---------|----------------|---------|---------|
| 1 | рН | 6.3 | 6.5-8.5 |
| 2 | TDS | 108 | - |
| 3 | E.C | 111 | - |
| 4 | Hardness | 39 | 200 |
| 5 | Chlorides | 82 | 200 |
| 6 | MPN | Ab | 1.0 |
| 7 | Odor and Color | Clear | - |

5.3 Waste water audit:

SETI campus generates huge amount of wastewater. Due to COVID pandemic very few amount of waste water was generated. Characterization was doen based on available waste water.

| Sr. No. | Parameter | Reading |
|---------|-----------|---------|
| 1 | pН | 8.99 |
| 2 | COD | 299 |
| 3 | BOD | 145 |
| 4 | TKN | 31 |

5.4 Solid waste Audit:

A waste audit is a physical analysis of waste composition to provide a detailed understanding of problems, identify potential opportunities, and give you a detailed analysis of your waste composition. A waste audit will help you clearly identify your waste generation to establish baseline or benchmark data, Characterize and quantify waste stream, Verify waste pathways, identify waste diversion opportunities and identify source reduction opportunities.

Solid waste is the unwanted or useless solid material generated from the human activities in residential, industrial or commercial area. Solid waste management reduce or eliminates the adverse impact on the environment and human health. Due to pandemics and closed premises only garden waste, dry tree leaves and tree branches were observed in the campus.

Assessment of soil was done to determine the quality of soil:

| Sr. No. | Test | Results |
|---------|----------|------------|
| 1 | рН | 6.0 |
| 2 | NPK | 2:4:1 |
| 3 | Acidity | 122 mg/lit |
| 4 | Hardness | 107 mg/lit |

5.5 Ambient Air Audit:

Ambient air quality refers to the condition or quality of air surrounding us and in the outdoors. National Ambient Air Quality Standards are the standards for ambient air quality set by the Central Pollution Control Board (CPCB) that is applicable nationwide. The CPCB has been conferred this power by the Air (Prevention and Control of Pollution) Act, 1981. Hence, auditing this ambient air quality is stated as ambient air audit.

SETI has carried out its ambient air audit at various locations in the premises. Air quality detector machine PS-21185 was used for air audit. Parameters such as Air quality were assessed. Following google earth pro images shows the assessed locations.

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |
| 7 | Point No 7 | Classroom 3 |

| 8 | Point No 8 | Block 1 |
|----|-------------|------------|
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of air quality monitoring:

| Point No | Location | Quality |
|----------|--------------|---------|
| 1 | Gate entry | Good |
| 2 | Passage | Fresh |
| 3 | Office | Good |
| 4 | Drawing hall | Fresh |
| 5 | Classroom 1 | Fresh |
| 6 | Classroom 2 | Fresh |
| 7 | Classroom 3 | Good |
| 8 | Block 1 | Good |
| 9 | Block 2 | Good |
| 10 | Block 3 | Good |
| 11 | Block 4 | Good |
| 12 | Open air | Good |
| 13 | Library | Fresh |
| 14 | Study room | Fresh |

5.6 Ambient Noise audit:

Ambient sound in relation to audio refers to the background noise present at a given scene or a location. This can include noises such as rain, traffic, crickets, birds, etc. Ambient sound levels are often measured in order to map sound conditions over a specific time to understand their variation with locale and various points. Ambient noise level is measured with a sound level meter. It is usually measured in Decibel (dB).

Three points were selected based on best suitable requirement for noise monitoring. RS-2250 instrument was used. Monitoring was carried out 3 times in a day for 3 months. Readings were collected in morning section, afternoon section and evening section. In addition to this monitoring was also carried out in library section, study room section, classrooms, tutorial rooms and laboratories. Average of all the readings are mentioned in the table below

| Sr. No. | Point number | Location |
|---------|--------------|--------------|
| 1 | Point No 1 | Gate entry |
| 2 | Point No 2 | Passage |
| 3 | Point No 3 | Office |
| 4 | Point No 4 | Drawing hall |
| 5 | Point No 5 | Classroom 1 |
| 6 | Point No 6 | Classroom 2 |
| 7 | Point No 7 | Classroom 3 |

| 8 | Point No 8 | Block 1 |
|----|-------------|------------|
| 9 | Point No 9 | Block 2 |
| 10 | Point No 10 | Block 3 |
| 11 | Point No 11 | Block 4 |
| 12 | Point No 12 | Open air |
| 13 | Point No 13 | Library |
| 14 | Point No 14 | Study room |

Results of noise assessment:

All the values are in decibels. Assessment values present average of 3 months data and the last column present the final average of morning noon and evening.

| Point No | Location | Average |
|----------|--------------|---------|
| 1 | Gate entry | 55.21 |
| 2 | Passage | 51.23 |
| 3 | Office | 51.22 |
| 4 | Drawing hall | 48.98 |
| 5 | Classroom 1 | 37.56 |
| 6 | Classroom 2 | 34.58 |
| 7 | Classroom 3 | 37.88 |
| 8 | Block 1 | 44.25 |
| 9 | Block 2 | 41.25 |
| 10 | Block 3 | 41.89 |
| 11 | Block 4 | 45.28 |
| 12 | Open air | 58.98 |
| 13 | Library | 33.02 |
| 14 | Study room | 31.89 |

6. Energy Audit:

An energy audit is an inspection survey and an analysis of energy flows for energy conservation in a building. It may include a process or system to reduce the amount of energy input into the system without negatively affecting the output. In commercial and industrial real estate, an energy audit is the first step in identifying opportunities to reduce energy expense and carbon footprint.

A nation is tiring to advance in quantity and quality to the spread of education among the common India and development of their intelligence. In India the entire field of education and other fields of intelligent activities had been monopolized by a handful of men before independence. But today we are marching towards the desirable status of a developed nation with fast strides. But the development should be a sustained one. For achieving such an interminable development energy management is essential. As far as concerning electricity crisis, we are facing lack of electricity during office work. So, institutional management is taking design regarding production of electricity and saving electricity for Eco social aspect. Energy requirement of India is growing and incomplete domestic fossil fuel treasury. The country has motivated strategy to enlarge its renewable energy resources and policy to establish the nuclear power plants. India increases the involvement of nuclear power to largely electrical energy development facility from 4.2% to 9%. India's industrial demand accounted for 35% of electrical power requirement, domestic household use accounted for 28%, agriculture 21%, commercial 9%, and public lighting and other miscellaneous applications accounted for the rest. Energy conservation means reduction in energy consumption without making any sacrifice of quantity or quality. A successful energy management program begins with energy conservation; it will lead to adequate rating of equipment's, using high efficiency equipment and change of habits which causes enormous wastages of energy. By observing all these study lack of electricity and huge electricity demands. It is necessary to plan to be self-sufficient in electricity requirement.

6.1 Connection details:

Institute receives electricity from MSEB i.e. Maharashtra State Electricity Distribution Co. Ltd. Following are the details about connection.

- **Type of connection:** HT
- Tariff: 146 HT-VIII B

- Sanctioned load: 300.00 KW
- Contract demand: 240.00 KVA
- Feeder voltage: 11 KV

Tariff Structure:

As per Maharashtra State Electricity Distribution Company Limited, HT and LT consumers have an option to take Time of Day (TOD) tariff instead of the normal tariff. Under TOD tariff electricity consumption and maximum demand in respect of HT consumers for different periods of the day i.e. normal period, peak load period and off-peak load period could be recorded by installing TOD meter. The maximum demand and consumption recorded in different periods could be billed on the following rates of the tariff applicable.

| TOD Tariffs | Rate % (Rs./Unit) |
|---|-------------------|
| 0000 Hrs- 0600 Hrs & 2200 Hrs- 2400 Hrs | -1.500 |
| 0600 Hrs- 0900 Hrs & 1200 Hrs- 1800 Hrs | 0.000 |
| 0900 Hrs- 1200 Hrs | 0.800 |
| 1800 Hrs- 2200 Hrs | 1.100 |

Power Factor:

Power Factor (PF) is an indicator of efficient utilization of power. In an AC (Alternating Current) electrical power system, PF is defined as the ratio of real power flowing to the load, to the apparent power in the circuit and is a dimensionless number.

6.4 ILER analysis:

Lighting is provided in industries, commercial buildings, indoor and outdoor for providing comfortable working environment. The primary objective is to provide the required lighting effect for the lowest installed load i.e. highest lighting at lowest power consumption. The purpose of performance test is to calculate the installed efficacy in terms of lux/watt/m² (existing or design) for general lighting installation. The calculated value can be compared with the norms for specific types of interior installations for assessing improvement options.

| Range | Condition |
|-------------|--------------------------------|
| 0.5 or less | Urgent activity required (UAR) |
| 0.51 - 0.70 | Review Suggested (RS) |
| 0.70- above | Good |

ILER analysis for various sections in SETI were carried out. Firstly using LUX meter illumination was measured and then numerical analysis was carried out. ILER gives idea about lighting conditions and measured regarding improving them.

| Sr. No. | Section | LUX reading | ILER | Condition |
|---------|---------------|-------------|------|-----------|
| 1 | Library | 148 | 0.77 | Good |
| 2 | Study room | 159 | 0.71 | Good |
| 3 | Classroom S1 | 133 | 0.46 | RS |
| 4 | Classrooms S2 | 138 | 0.60 | RS |
| 5 | Laboratories | 211 | 0.84 | Good |
| 6 | Office | 178 | 0.74 | Good |

Main Building analysis

Reasons for Good ILER:

- Proper placement of windows and doors so that natural light is available well.
- Good ventilation system.

Use of LED bulds:

Institute has toatl light load connection of : 46500 watts

LED load connection is: 32300 watts

Light load other than LED: 14200 watts

Percentage of LED use in institute: 69.46%

Alternatice methods of energy:

Solar power plant at SETI

Capacity of plant: 70kw

Hybrid grid: (Solar + Wind): 50kw

Total capacity: 70+50 = 120 kw
